# CalCalendar Class Reference

---

<b>Inherits from</b>	NSObject
<b>Conforms to</b>	NSCopying NSObject (NSObject)
<b>Framework</b>	/System/Library/Frameworks/CalendarStore.framework
<b>Availability</b>	Available in Mac OS X v10.5 and later.
<b>Companion guide</b>	Calendar Store Programming Guide
<b>Declared in</b>	CalCalendar.h
<b>Related sample code</b>	Reminders

## Overview

A `CalCalendar` object represents a calendar in iCal.

Use the `calendar` (page 8) method to create a `CalCalendar` object directly, or use the `CalCalendarStore` `calendars` method to get an array of all the calendar objects. If you know the calendar UID, use the `calendarWithUID:CalCalendarStore` method to get the associated calendar object.

Use the properties in this class to get attributes about a calendar—for example, use the properties to get the title and color of a calendar. Use the `eventsWithPredicate:` and `tasksWithPredicate:CalCalendarStore` methods to fetch associated events and tasks.

If you retain `CalCalendar` objects, then register for the `CalCalendarsChangedNotification` notification.

## Tasks

### Creating Calendars

- + `calendar` (page 8)  
Creates and returns a new `CalCalendar` object.

## Getting Properties

`color` (page 6) *property*

The calendar's color.

`isEditable` (page 6) *property*

A Boolean value indicating whether the calendar is editable or not.

`notes` (page 7) *property*

Textual notes about the calendar.

`title` (page 7) *property*

The calendar's title.

`type` (page 7) *property*

The type of calendar.

`uid` (page 7) *property*

A unique identifier for the receiver.

## Properties

For more about Objective-C properties, see “Properties” in *The Objective-C 2.0 Programming Language*.

### color

The calendar's color.

```
@property(copy) NSColor * color;
```

#### Availability

Available in Mac OS X v10.5 and later.

#### Declared In

CalCalendar.h

### isEditable

A Boolean value indicating whether the calendar is editable or not.

```
@property(readonly) BOOL isEditable;
```

#### Discussion

Set to YES if the calendar is editable; otherwise, NO.

#### Availability

Available in Mac OS X v10.5 and later.

#### Declared In

CalCalendar.h

## notes

Textual notes about the calendar.

```
@property(copy) NSString * notes;
```

### Availability

Available in Mac OS X v10.5 and later.

### Declared In

CalCalendar.h

## title

The calendar's title.

```
@property(copy) NSString * title;
```

### Availability

Available in Mac OS X v10.5 and later.

### Related Sample Code

Reminders

### Declared In

CalCalendar.h

## type

The type of calendar.

```
@property(readonly) NSString * type;
```

### Discussion

The value of this property is one of the constants described in “[Calendar Types](#)” (page 8).

### Availability

Available in Mac OS X v10.5 and later.

### Declared In

CalCalendar.h

## uid

A unique identifier for the receiver.

```
@property(readonly) NSString * uid;
```

### Availability

Available in Mac OS X v10.5 and later.

### Declared In

CalCalendar.h

## Class Methods

### calendar

Creates and returns a new CalCalendar object.

```
+ (id)calendar
```

#### Return Value

A newly created and initialized CalCalendar object.

#### Availability

Available in Mac OS X v10.5 and later.

#### Related Sample Code

Reminders

#### Declared In

CalCalendar.h

## Constants

### Calendar Types

The type of calendar.

```
extern NSString * const CalCalendarTypeBirthday;
extern NSString * const CalCalendarTypeCalDAV;
extern NSString * const CalCalendarTypeLocal;
extern NSString * const CalCalendarTypeSubscription;
extern NSString * const CalCalendarTypeIMAP;
```

#### Constants

CalCalendarTypeBirthday

An birthday calendar maintained by Address Book.

Available in Mac OS X v10.5 and later.

Declared in CalCalendar.h.

CalCalendarTypeCalDAV

A CalDAV server calendar.

Available in Mac OS X v10.5 and later.

Declared in CalCalendar.h.

CalCalendarTypeLocal

A local calendar that may be synced over .Mac.

Available in Mac OS X v10.5 and later.

Declared in CalCalendar.h.

CalCalendarTypeSubscription

**A subscribed calendar.**

**Available in Mac OS X v10.5 and later.**

**Declared in** CalCalendar.h.

CalCalendarTypeIMAP

**An IMAP calendar.**

**Available in Mac OS X v10.5 and later.**

**Declared in** CalCalendar.h.

**Declared In**

CalendarStore/CalCalendar.h

# Document Revision History

---

This table describes the changes to *CalCalendar Class Reference*.

Date	Notes
2007-07-08	New document that describes the class used to get attributes about a calendar.
