# NSCachedImageRep Class Reference

---

<b>Inherits from</b>	NSImageRep : NSObject
<b>Conforms to</b>	NSCoding (NSImageRep) NSCopying (NSImageRep) NSObject (NSObject)
<b>Framework</b>	/System/Library/Frameworks/AppKit.framework
<b>Availability</b>	Available in Mac OS X v10.0 and later.
<b>Companion guide</b>	Cocoa Drawing Guide
<b>Declared in</b>	NSCachedImageRep.h

## Overview

An `NSCachedImageRep` object store image data in a form that can be readily transferred to the screen. An `NSCachedImageRep` object differs from other image representation objects in that it simply stores the already rendered image, whereas other image representation objects generally have knowledge about how to render the image from source data.

You typically do not use this class directly. Instead, `NSImage` and its other image representation objects create instances of `NSCachedImageRep` as needed to cache versions of the rendered image. This caching speeds up screen-based drawing for existing images during subsequent rendering operations. Cached image representations are also used to capture drawing commands for images created programmatically by locking focus on an image.

## Tasks

### Initializing an `NSCachedImageRep`

- [initWithSize:depth:separate:alpha:](#) (page 6)  
Returns an `NSCachedImageRep` object initialized with the specified image characteristics.
- [initWithWindow:rect:](#) (page 6)  
Returns an `NSCachedImageRep` object initialized for drawing in the specified window.

## Getting the Representation

- [rect](#) (page 7)  
Returns the rectangle where the receiver is cached.
- [window](#) (page 7)  
Returns the window where the receiver is cached.

## Instance Methods

### initWithSize:depth:separate:alpha:

Returns an `NSCachedImageRep` object initialized with the specified image characteristics.

```
(id) initWithSize:(NSSize) size depth:(NSWindowDepth) depth separate:(BOOL) flag
alpha:(BOOL) alpha
```

#### Parameters

*size*

The size of the image, measured in points.

*depth*

The bit depth of the image. Specify 0 if you want the image to be the same depth as the deepest screen on the current system.

*flag*

YES if the receiver should use a separate offscreen window to store the image; otherwise, NO if the receiver should use a shared window.

*alpha*

YES if the image includes transparency information; otherwise, NO.

#### Return Value

The initialized `NSCachedImageRep` object or `nil` if the object could not be initialized.

#### Availability

Available in Mac OS X v10.0 and later.

#### See Also

- [setAlpha:](#) (`NSImageRep`)
- [setBitsPerSample:](#) (`NSImageRep`)
- [setCacheDepthMatchesImageDepth:](#) (`NSImage`)
- [setCachedSeparately:](#) (`NSImage`)

#### Declared In

`NSCachedImageRep.h`

### initWithWindow:rect:

Returns an `NSCachedImageRep` object initialized for drawing in the specified window.

```
(id) initWithWindow:(NSWindow *) aWindow rect:(NSRect) aRect
```

### Parameters

*aWindow*

The window (typically offscreen) in which the image is to be rendered. The window is retained by the receiver.

*aRect*

The position and size of the image in the specified window. This rectangle should be specified in the base coordinate system of the window.

### Discussion

You must draw the image yourself in the designated part of the window. There are no `NSCachedImageRep` methods for this purpose.

### Availability

Available in Mac OS X v10.0 and later.

### See Also

- `size` (`NSImageRep`)

### Declared In

`NSCachedImageRep.h`

## **rect**

Returns the rectangle where the receiver is cached.

- (`NSRect`) `rect`

### Return Value

The rectangle in the associated offscreen window where the receiver's image is located.

### Availability

Available in Mac OS X v10.0 and later.

### See Also

- `size` (`NSImageRep`)

### Declared In

`NSCachedImageRep.h`

## **window**

Returns the window where the receiver is cached.

- (`NSWindow *`) `window`

### Return Value

The window (typically offscreen) used to store the image.

### Availability

Available in Mac OS X v10.0 and later.

### Declared In

`NSCachedImageRep.h`

# Document Revision History
