NSColorWell Class Reference

Inherits from	NSControl : NSView : NSResponder : NSObject
Conforms to	NSAnimatablePropertyContainer (NSView) NSCoding (NSResponder) NSObject (NSObject)
Framework	/System/Library/Frameworks/AppKit.framework
Availability	Available in Mac OS X v10.0 and later.
Companion guide	Color Programming Topics for Cocoa
Declared in	NSColorWell.h
Related sample code	OpenGLCompositorLab PDF Annotation Editor Quartz 2D Shadings Quartz Composer QCTV Sketch-112

Overview

An `NSColorWell` object is an `NSControl` for selecting and displaying a single color value. An example of an `NSColorWell` object (or simply color well) is found in an `NSColorPanel`, which uses a color well to display the current color selection. A color well is available from the Palettes panel of Interface Builder.

Tasks

Managing Color From Color Wells

- `color` (page 7)
Returns the color of the receiver.
- `setColor:` (page 9)
Sets the color of the receiver and redraws the receiver.
- `takeColorFrom:` (page 9)
Changes the color of the receiver to that of the specified object.

Activating and Deactivating Color Wells

- [activate](#): (page 6)
Activates the receiver, displays the color panel, and makes the current color the same as its own.
- [deactivate](#) (page 7)
Deactivates the receiver and redraws it.
- [isActive](#) (page 8)
Returns a Boolean value indicating whether the receiver is active.

Managing Borders of Color Wells

- [isBordered](#) (page 8)
Returns a Boolean value indicating whether the receiver has a border.
- [setBordered](#): (page 8)
Places or removes a border on the receiver and redraws the receiver.

Drawing a Color Well

- [drawWellInside](#): (page 7)
Draws the colored area inside the receiver at the specified location without drawing borders.

Instance Methods

activate:

Activates the receiver, displays the color panel, and makes the current color the same as its own.

- (void)activate:(BOOL)exclusive

Parameters

exclusive

YES to deactivate any other color wells; NO to keep them active. If a color panel is active with *exclusive* set to YES and another is subsequently activated with *exclusive* set to NO, the exclusive setting of the first panel is ignored.

Discussion

This method redraws the receiver. An active color well will have its color updated when the current color of the `NSColorPanel` changes. Any color well that shows its border highlights the border when it's active.

Availability

Available in Mac OS X v10.0 and later.

See Also

- [deactivate](#) (page 7)
- [isActive](#) (page 8)

Declared In

NSColorWell.h

color

Returns the color of the receiver.

- (NSColor *)color

Return Value

The color of the receiver.

Availability

Available in Mac OS X v10.0 and later.

See Also

- [setColor:](#) (page 9)
- [takeColorFrom:](#) (page 9)

Related Sample Code

ObjectPath

Declared In

NSColorWell.h

deactivate

Deactivates the receiver and redraws it.

- (void)deactivate

Availability

Available in Mac OS X v10.0 and later.

See Also

- [activate:](#) (page 6)
- [isActive](#) (page 8)

Declared In

NSColorWell.h

drawWellInside:

Draws the colored area inside the receiver at the specified location without drawing borders.

- (void)drawWellInside:(NSRect)insideRect

Parameters

insideRect

The rectangle specifying the area within which to draw.

Availability

Available in Mac OS X v10.0 and later.

Declared In

NSColorWell.h

isActive

Returns a Boolean value indicating whether the receiver is active.

- (BOOL)isActive

Return Value

YES if the receiver is active, NO otherwise.

Availability

Available in Mac OS X v10.0 and later.

Declared In

NSColorWell.h

isBordered

Returns a Boolean value indicating whether the receiver has a border.

- (BOOL)isBordered

Return Value

YES if the receiver is bordered, NO otherwise.

Availability

Available in Mac OS X v10.0 and later.

See Also

- [setBordered:](#) (page 8)

Declared In

NSColorWell.h

setBordered:

Places or removes a border on the receiver and redraws the receiver.

- (void)setBordered:(BOOL)bordered

Parameters

bordered

YES to place a border on the receiver, NO to remove it.

Availability

Available in Mac OS X v10.0 and later.

See Also

- [isBordered](#) (page 8)

Declared In

NSColorWell.h

setColor:

Sets the color of the receiver and redraws the receiver.

- (void)setColor:(NSColor *)*color*

Parameters

color

The new color for the color well.

Availability

Available in Mac OS X v10.0 and later.

See Also

- [color](#) (page 7)

- [takeColorFrom:](#) (page 9)

Declared In

NSColorWell.h

takeColorFrom:

Changes the color of the receiver to that of the specified object.

- (void)takeColorFrom:(id)*sender*

Parameters

sender

The object from which to take the new color.

Availability

Available in Mac OS X v10.0 and later.
