NSCustomImageRep Class Reference

Inherits from	NSImageRep : NSObject
Conforms to	NSCoding (NSImageRep) NSCopying (NSImageRep) NSObject (NSObject)
Framework	/System/Library/Frameworks/AppKit.framework
Availability	Available in Mac OS X v10.0 and later.
Companion guide	Cocoa Drawing Guide
Declared in	NSCustomImageRep.h

Overview

An `NSCustomImageRep` object uses a delegate object to render an image. When called upon to produce an image, it sends a message to its delegate to do the actual drawing. You can use this class to support custom image formats without going to the trouble of subclassing `NSImageRep` directly.

Tasks

Initializing a New `NSCustomImageRep`

- [initWithDrawSelector:delegate:](#) (page 6)
Returns an `NSCustomImageRep` object initialized with the specified delegate information.

Identifying the Object

- [delegate](#) (page 6)
Returns the delegate object that renders the image for the receiver.
- [drawSelector](#) (page 6)
Returns the selector for the delegate's drawing method.

Instance Methods

delegate

Returns the delegate object that renders the image for the receiver.

- (id)delegate

Return Value

The delegate object.

Availability

Available in Mac OS X v10.0 and later.

Declared In

NSCustomImageRep.h

drawSelector

Returns the selector for the delegate's drawing method.

- (SEL)drawSelector

Return Value

The selector for the delegate's drawing method.

Availability

Available in Mac OS X v10.0 and later.

Declared In

NSCustomImageRep.h

initWithDrawSelector:delegate:

Returns an NSCustomImageRep object initialized with the specified delegate information.

- (id)initWithDrawSelector:(SEL)aMethod delegate:(id)anObject

Parameters

aMethod

The selector to call when it is time to draw the image. The method should take a single parameter of type *id* that represents the NSCustomImageRep object that initiated drawing. The method must draw the image starting at the point (0, 0) in the current coordinate system.

anObject

The delegate object that responds to the selector in *aMethod*.

Return Value

An initialized NSCustomImageRep object, or nil if the object could not be initialized.

Discussion

When the receiver is asked to draw the image, it sends the specified message to the selector, passing itself as a parameter to the delegate method. The delegate's drawing method should have the following form:

```
- (void)myCustomDrawMethod:(id)anNSCustomImageRep;
```

Availability

Available in Mac OS X v10.0 and later.
