## Overview

An `NSImageView` object displays a single image from an `NSImage` object in a frame and can optionally allow a user to drag an image to it.

## Tasks

### Choosing the Image

- [image](#) (page 7)  
Returns the `NSImage` object displayed by the receiver.
- [setImage:](#) (page 10)  
Sets the image of the receiver.

## Choosing the Frame

- [imageFrameStyle](#) (page 8)  
Returns the style of frame that appears around the image.
- [setImageFrameStyle:](#) (page 11)  
Sets the kind of frame that borders the image.

## Aligning and Scaling the Image

- [imageAlignment](#) (page 8)  
Returns the position of the cell's image in the frame.
- [setImageAlignment:](#) (page 11)  
Sets the position of the image in the frame.
- [imageScaling](#) (page 8)  
Returns the way the cell's image alters to fit the frame.
- [setImageScaling:](#) (page 12)  
Sets the way the image alters to fit the frame.

## Responding to User Events

- [isEditable](#) (page 9)  
Returns a Boolean value indicating whether the user can drag a new image into the frame.
- [setEditable:](#) (page 10)  
Sets whether the user can drag a new image into the frame.

## Animating Image Playback

- [animates](#) (page 7)  
Returns a Boolean value indicating whether the receiver automatically plays animated images.
- [setAnimates:](#) (page 9)  
Sets whether the receiver automatically plays an animated image that is assigned to it.

## Pasteboard Support

- [setAllowsCutCopyPaste:](#) (page 9)  
Sets whether the receiver allows the user to cut, copy and paste the image contents.
- [allowsCutCopyPaste](#) (page 7)  
Returns a Boolean value indicating whether the receiver allows the user to cut, copy and paste of the image contents.

## Instance Methods

### allowsCutCopyPaste

Returns a Boolean value indicating whether the receiver allows the user to cut, copy and paste of the image contents.

- (BOOL)allowsCutCopyPaste

#### Return Value

YES if the user can cut, copy, and paste the image contents; otherwise, NO.

#### Availability

Available in Mac OS X v10.4 and later.

#### See Also

- [setAllowsCutCopyPaste:](#) (page 9)

#### Declared In

NSImageView.h

### animates

Returns a Boolean value indicating whether the receiver automatically plays animated images.

- (BOOL)animates

#### Return Value

YES if the receiver automatically plays animated images; otherwise, NO. The default value is YES for NSImageView objects you create programmatically. For NSImageView objects loaded from a nib file, the control takes the value set in Interface Builder.

#### Discussion

The timing and looping characteristics of the animation are taken from the image data. If this method returns NO, the receiver displays the first frame of the animation only.

#### Availability

Available in Mac OS X v10.3 and later.

#### See Also

- [setAnimates:](#) (page 9)

#### Declared In

NSImageView.h

### image

Returns the NSImage object displayed by the receiver.

- (NSImage \*)image

### Return Value

The `NSImage` object.

### Availability

Available in Mac OS X v10.0 and later.

### See Also

- [setImage:](#) (page 10)

### Declared In

`NSImageView.h`

## imageAlignment

Returns the position of the cell's image in the frame.

- (`NSImageAlignment`) `imageAlignment`

### Return Value

The image alignment. For a list of possible alignments, see [setImageAlignment:](#) (page 11). The default value is `NSImageAlignCenter`.

### Availability

Available in Mac OS X v10.0 and later.

### Declared In

`NSImageView.h`

## imageFrameStyle

Returns the style of frame that appears around the image.

- (`NSImageFrameStyle`) `imageFrameStyle`

### Return Value

The current image style. For a list of frame styles, see [setImageFrameStyle:](#) (page 11). The default value is `NSImageFrameNone`.

### Availability

Available in Mac OS X v10.0 and later.

### Related Sample Code

Transformed Image

### Declared In

`NSImageView.h`

## imageScaling

Returns the way the cell's image alters to fit the frame.

- (`NSImageScaling`) `imageScaling`

**Return Value**

The scaling option. For a list of possible values, see [setImageScaling:](#) (page 12). The default value is `NSScaleProportionally`.

**Availability**

Available in Mac OS X v10.0 and later.

**Declared In**

`NSImageView.h`

**isEditable**

Returns a Boolean value indicating whether the user can drag a new image into the frame.

- (BOOL)isEditable

**Return Value**

YES if the user can drag an image into the receiver's frame; otherwise, NO. The default value is YES.

**Availability**

Available in Mac OS X v10.0 and later.

**See Also**

- [setEditable:](#) (page 10)

**Declared In**

`NSImageView.h`

**setAllowsCutCopyPaste:**

Sets whether the receiver allows the user to cut, copy and paste the image contents.

- (void)setAllowsCutCopyPaste:(BOOL)allow

**Parameters**

*allow*

YES if the user can cut, copy, and paste the image contents; otherwise, NO to prevent the use of pasteboard operations.

**Availability**

Available in Mac OS X v10.4 and later.

**See Also**

- [allowsCutCopyPaste](#) (page 7)

**Declared In**

`NSImageView.h`

**setAnimates:**

Sets whether the receiver automatically plays an animated image that is assigned to it.

- (void)setAnimates:(BOOL)*flag*

**Parameters**

*flag*

YES if the receiver should automatically plays animated images; otherwise, NO.

**Discussion**

The timing and looping characteristics of the animation are taken from the image data. If you specify NO, the receiver displays the first frame of the animation only.

**Availability**

Available in Mac OS X v10.3 and later.

**See Also**

- [animates](#) (page 7)

**Declared In**

UIImageView.h

**setEditable:**

Sets whether the user can drag a new image into the frame.

- (void)setEditable:(BOOL)*flag*

**Parameters**

*flag*

YES if the user can drag an image into the receiver's frame; otherwise, NO.

**Availability**

Available in Mac OS X v10.0 and later.

**See Also**

- [isEditable](#) (page 9)

**Declared In**

UIImageView.h

**setImage:**

Sets the image of the receiver.

- (void)setImage:(UIImage \*)*image*

**Parameters**

*image*

The image to display in the receiver.

**Availability**

Available in Mac OS X v10.0 and later.

**See Also**

- [image](#) (page 7)

### Related Sample Code

### Declared In

NSImageView.h

## setImageAlignment:

Sets the position of the image in the frame.

```
- (void)setImageAlignment:(NSImageAlignment)alignment
```

### Parameters

*alignment*

The possible values for this parameter are:

- NSImageAlignLeft
- NSImageAlignRight
- NSImageAlignCenter
- NSImageAlignTop
- NSImageAlignBottom
- NSImageAlignTopLeft
- NSImageAlignTopRight
- NSImageAlignBottomLeft
- NSImageAlignBottomRight

### Availability

Available in Mac OS X v10.0 and later.

### See Also

- [imageAlignment](#) (page 8)

### Declared In

NSImageView.h

## setImageFrameStyle:

Sets the kind of frame that borders the image.

```
- (void)setImageFrameStyle:(NSImageFrameStyle)frameStyle
```

**Parameters***frameStyle*

The possible values for this parameter are as follows:

- `NSImageFrameNone`—an invisible frame
- `NSImageFramePhoto`—a thin black outline and a dropped shadow
- `NSImageFrameGrayBezel`—a gray, concave bezel that makes the image look sunken
- `NSImageFrameGroove`—a thin groove that looks etched around the image
- `NSImageFrameButton`—a convex bezel that makes the image stand out in relief, like a button

**Availability**

Available in Mac OS X v10.0 and later.

**See Also**

- [imageFrameStyle](#) (page 8)

**Declared In**

`NSImageView.h`

**setImageScaling:**

Sets the way the image alters to fit the frame.

```
- (void)setImageScaling:(NSImageScaling)scaling
```

**Parameters***scaling*

The possible values for this parameter are:

- `NSScaleProportionally`. If the image is too large, it shrinks to fit inside the frame. The proportions of the image are preserved. The image is never scaled up to fit a larger frame.
- `NSScaleToFit`. The image shrinks or expands, and its proportions distort, until it exactly fits the frame.
- `NSScaleNone`. The size and proportions of the image don't change. If the frame is too small to display the whole image, the edges of the image are trimmed off.

**Availability**

Available in Mac OS X v10.0 and later.

**See Also**

- [imageScaling](#) (page 8)

**Declared In**

`NSImageView.h`

# Document Revision History
