NSTextTable Class Reference

Inherits from	NSTextBlock : NSObject
Conforms to	NSCoding (NSTextBlock) NSCopying (NSTextBlock) NSObject (NSObject)
Framework	/System/Library/Frameworks/AppKit.framework
Availability	Available in Mac OS X v10.4 and later.
Declared in	NSTextTable.h
Companion guides	Text System Overview Text Layout Programming Guide for Cocoa
Related sample code	iSpend

Overview

An `NSTextTable` object represents a text table as a whole. It is responsible for laying out and drawing the text table blocks it contains, and it maintains the basic parameters of the table.

Tasks

Getting and Setting Number of Columns

- [numberOfColumns](#) (page 9)
Returns the number of columns in the text table.
- [setNumberOfColumns:](#) (page 11)
Sets the number of columns in the text table.

Getting and Setting Layout Algorithm

- [layoutAlgorithm](#) (page 8)
Returns the text table layout algorithm.

- [setLayoutAlgorithm:](#) (page 11)
Sets the text table layout algorithm.

Collapsing Borders

- [collapsesBorders](#) (page 7)
Returns whether the text table borders are collapsible.
- [setCollapsesBorders:](#) (page 10)
Sets whether the text table borders are collapsible.

Hiding Empty Cells

- [hidesEmptyCells](#) (page 8)
Returns whether the text table hides empty cells.
- [setHidesEmptyCells:](#) (page 10)
Sets whether the text table hides empty cells.

Determining Layout Rectangles

- [rectForBlock:layoutAtPoint:inRect:textContainer:characterRange:](#) (page 9)
Returns the rectangle within which glyphs should be laid out for a text table block.
- [boundsRectForBlock:contentRect:inRect:textContainer:characterRange:](#) (page 6)
Returns the rectangle the text table block actually occupies, including padding, borders, and margins.

Drawing the Table

- [drawBackgroundForBlock:withFrame:inView:characterRange:layoutManager:](#) (page 7)
Draws any colors and other decorations for a text table block.

Instance Methods

boundsRectForBlock:contentRect:inRect:textContainer:characterRange:

Returns the rectangle the text table block actually occupies, including padding, borders, and margins.

```
- (NSRect)boundsRectForBlock:(NSTextTableBlock *)block
  contentRect:(NSRect)contentRect inRect:(NSRect)rect
  textContainer:(NSTextContainer *)textContainer characterRange:(NSRange)charRange
```

Parameters

block

The text table block that wants to determine where to layout its glyphs.

contentRect

The actual rectangle in which the text was laid out, as determined by `rectForLayoutAtPoint:inRect:textContainer:characterRange:.`

rect

The initial rectangle in *textContainer* proposed by the typesetter.

textContainer

The text container being used for the layout.

charRange

The range of the characters whose glyphs are to be drawn.

Return Value

The rectangle the text table block actually occupies, including padding, borders, and margins.

Discussion

This method is called by the text table block *block* after it is laid out to determine the rectangle the text table block actually occupies, including padding, borders, and margins.

Availability

Available in Mac OS X v10.4 and later.

See Also

- [rectForBlock:layoutAtPoint:inRect:textContainer:characterRange:](#) (page 9)

Declared In

NSTextTable.h

collapsesBorders

Returns whether the text table borders are collapsible.

- (BOOL)collapsesBorders

Return Value

YES if the text table borders are collapsible, NO otherwise.

Availability

Available in Mac OS X v10.4 and later.

See Also

- [setCollapsesBorders:](#) (page 10)

Declared In

NSTextTable.h

drawBackgroundForBlock:withFrame:inView:characterRange:layoutManager:

Draws any colors and other decorations for a text table block.

```
- (void)drawBackgroundForBlock:(NSTextTableBlock *)block withFrame:(NSRect)frameRect
    inView:(NSView *)controlView characterRange:(NSRange)charRange
    layoutManager:(NSLayoutManager *)layoutManager
```

Parameters*block*

The text table block that wants to draw its background.

frameRect

The area in which drawing occurs.

controlView

The view controlling the drawing.

charRange

The range of the characters whose glyphs are to be drawn.

layoutManager

The layout manager controlling the typesetting.

Discussion

This methods is called by the text table block *block* to draw any colors and other decorations before the text is drawn.

Availability

Available in Mac OS X v10.4 and later.

Declared In

NSTextTable.h

hidesEmptyCells

Returns whether the text table hides empty cells.

- (BOOL)hidesEmptyCells

Return Value

YES if the text table hides empty cells, NO otherwise.

Discussion

If empty cells are hidden, locations with empty cells allow the background of the enclosing block or text container to show through.

Availability

Available in Mac OS X v10.4 and later.

See Also- [setHidesEmptyCells:](#) (page 10)**Declared In**

NSTextTable.h

layoutAlgorithm

Returns the text table layout algorithm.

- (NSTextTableLayoutAlgorithm)layoutAlgorithm

Return Value

The text table layout algorithm.

Availability

Available in Mac OS X v10.4 and later.

See Also

- [setLayoutAlgorithm:](#) (page 11)

Declared In

NSTextTable.h

numberOfColumns

Returns the number of columns in the text table.

- (NSInteger)numberOfColumns

Return Value

The number of columns in the text table.

Availability

Available in Mac OS X v10.4 and later.

See Also

- [setNumberOfColumns:](#) (page 11)

Declared In

NSTextTable.h

rectForBlock:layoutAtPoint:inRect:textContainer:characterRange:

Returns the rectangle within which glyphs should be laid out for a text table block.

```
(NSRect)rectForBlock:(NSTextTableBlock *)block layoutAtPoint:(NSPoint)startingPoint
    inRect:(NSRect)rect textContainer:(NSTextContainer *)textContainer
    characterRange:(NSRange)charRange
```

Parameters

block

The text table block that wants to determine where to layout its glyphs.

startingPoint

The location, in container coordinates, where layout begins.

rect

The rectangle in which the block is constrained to lie. For top-level blocks, this is the container rectangle of *textContainer*; for nested blocks, this is the layout rectangle of the enclosing block.

textContainer

The text container being used for the layout.

charRange

The range of the characters whose glyphs are to be drawn.

Return Value

The rectangle within which glyphs should be laid out.

Discussion

This method is called by the text table block *block* to determine the rectangle within which glyphs should be laid out for the text table block.

Availability

Available in Mac OS X v10.4 and later.

See Also

- [boundsRectForBlock:contentRect:inRect:textContainer:characterRange:](#) (page 6)

Declared In

NSTextTable.h

setCollapsesBorders:

Sets whether the text table borders are collapsible.

```
- (void)setCollapsesBorders:(BOOL)flag
```

Parameters

flag

YES if the text table borders should be collapsible, NO otherwise.

Availability

Available in Mac OS X v10.4 and later.

See Also

- [collapsesBorders](#) (page 7)

Related Sample Code

iSpend

Declared In

NSTextTable.h

setHidesEmptyCells:

Sets whether the text table hides empty cells.

```
- (void)setHidesEmptyCells:(BOOL)flag
```

Parameters

flag

YES if the text table should hide empty cells, NO otherwise.

Discussion

If empty cells are hidden, locations with empty cells allow the background of the enclosing block or text container to show through.

Availability

Available in Mac OS X v10.4 and later.

See Also

- [hidesEmptyCells](#) (page 8)

Related Sample Code

iSpend

Declared In

NSTextTable.h

setLayoutAlgorithm:

Sets the text table layout algorithm.

```
- (void)setLayoutAlgorithm:(NSTextTableLayoutAlgorithm)algorithm
```

Parameters

algorithm

The new layout algorithm.

Availability

Available in Mac OS X v10.4 and later.

See Also

- [layoutAlgorithm](#) (page 8)

Related Sample Code

iSpend

Declared In

NSTextTable.h

setNumberOfColumns:

Sets the number of columns in the text table.

```
- (void)setNumberOfColumns:(NSUInteger)numCols
```

Parameters

numCols

The new number of columns.

Availability

Available in Mac OS X v10.4 and later.

See Also

- [numberOfColumns](#) (page 9)

Related Sample Code

Declared In

NSTextTable.h

Constants

NSTextTableLayoutAlgorithm

These constants, specifying the type of text table layout algorithm, are used with [setLayoutAlgorithm:](#) (page 11).

```
enum {
    NSTextTableAutomaticLayoutAlgorithm = 0,
    NSTextTableFixedLayoutAlgorithm    = 1
};
typedef NSUInteger NSTextTableLayoutAlgorithm;
```

Constants

NSTextTableAutomaticLayoutAlgorithm

Specifies automatic layout algorithm

Available in Mac OS X v10.4 and later.

Declared in NSTextTable.h.

NSTextTableFixedLayoutAlgorithm

Specifies fixed layout algorithm

Available in Mac OS X v10.4 and later.

Declared in NSTextTable.h.

Declared In

NSTextTable.h

Document Revision History
