NSChangeSpelling Protocol Reference

Adopted by	NSText
Framework	/System/Library/Frameworks/AppKit.framework
Availability	Available in Mac OS X v10.0 and later.
Companion guide	Spell Checking
Declared in	NSSpellProtocol.h

Overview

This protocol is implemented by objects in the responder chain that can correct a misspelled word. See the `NSSpellChecker` class description for more information.

Tasks

Changing Spellings

- [changeSpelling:](#) (page 5)

Replaces the selected word in the receiver with a corrected version from the Spelling panel.

Instance Methods

changeSpelling:

Replaces the selected word in the receiver with a corrected version from the Spelling panel.

- (void)changeSpelling:(id)sender

Discussion

This message is sent by the `NSSpellChecker` to the object whose text is being checked. To get the corrected spelling, ask *sender* for the string value of its selected cell (visible to the user as the text field in the Spelling panel). This method should replace the selected portion of the text with the string that it gets from the `NSSpellChecker`.

Availability

Available in Mac OS X v10.0 and later.

Declared In

NSSpellProtocol.h

Document Revision History

This table describes the changes to *NSChangeSpelling Protocol Reference*.
