NSInputServerMouseTracker Protocol Reference

Adopted by	NSInputServer
Framework	/System/Library/Frameworks/AppKit.framework
Availability	Available in Mac OS X v10.0 and later.
Companion guide	Text Input Management
Declared in	NSInputServer.h

Overview

An `NSInputServiceProvider` object (an "NSInputServer" subclass object or a delegate of an `NSInputServer` object) may need to implement this protocol. See the `NSInputServiceProvider` protocol description.

The methods in this protocol differ from typical mouse events in that they have an additional argument which is the index of the character within the text view's text storage. When an text view object forwards a mouse event to the input manager (with `handleMouseEvent:`), the input manager calls the text view's `characterIndexForPoint:` method to get the index, which it then passes on to the appropriate method in this protocol.

Tasks

Handling Mouse Events

- [mouseDownOnCharacterIndex:atCoordinate:withModifier:client:](#) (page 6)
A mouse down event happened at given *index* within the *sender* text view's text storage, at the given *point*, with modifier keys identified in *flags*.
- [mouseDraggedOnCharacterIndex:atCoordinate:withModifier:client:](#) (page 6)
A mouse dragged event happened at given *index* within the *sender* text view's text storage, at the given *point*, with modifier keys identified in *flags*.
- [mouseUpOnCharacterIndex:atCoordinate:withModifier:client:](#) (page 6)
A mouse up event happened at given *index* within the *sender* text view's text storage, at the given *point*, with modifier keys identified in *flags*.

Instance Methods

mouseDownOnCharacterIndex:atCoordinate:withModifier:client:

A mouse down event happened at given *index* within the *sender* text view's text storage, at the given *point*, with modifier keys identified in *flags*.

```
- (BOOL)mouseDownOnCharacterIndex:(NSUInteger)index atCoordinate:(NSPoint)point
    withModifier:(NSUInteger)flags client:(id)sender
```

Discussion

Returns YES if it consumes the event; in that case, a mouse dragged or a mouse up message will follow. If NO is returned, then neither of the other two events will follow.

Availability

Available in Mac OS X v10.0 and later.

See Also

- `handleMouseEvent:` (NSInputManager)

Declared In

NSInputServer.h

mouseDraggedOnCharacterIndex:atCoordinate:withModifier:client:

A mouse dragged event happened at given *index* within the *sender* text view's text storage, at the given *point*, with modifier keys identified in *flags*.

```
- (BOOL)mouseDraggedOnCharacterIndex:(NSUInteger)index atCoordinate:(NSPoint)point
    withModifier:(NSUInteger)flags client:(id)sender
```

Discussion

Returns YES if it consumes the event; in that case, either another mouse dragged or a mouse up message will follow. If NO is returned, then neither message will follow.

Availability

Available in Mac OS X v10.0 and later.

See Also

- `handleMouseEvent:` (NSInputManager)

Declared In

NSInputServer.h

mouseUpOnCharacterIndex:atCoordinate:withModifier:client:

A mouse up event happened at given *index* within the *sender* text view's text storage, at the given *point*, with modifier keys identified in *flags*.

```
- (void)mouseUpOnCharacterIndex:(NSUInteger)index atCoordinate:(NSPoint)point
    withModifier:(NSUInteger)flags client:(id)sender
```

Discussion

This event is always consumed.

Availability

Available in Mac OS X v10.0 and later.

See Also

- `handleMouseEvent:` (NSInputManager)

Declared In

NSInputServer.h

Document Revision History
