DOMHTMLDocument Additions Reference

(informal protocol)

Inherits from DOMDocument : DOMNode : DOMObject : WebScriptObject : NSObject

Conforms to DOMEventTarget (DOMNode)

NSCopying (DOMObject) NSObject (NSObject)

Framework /System/Library/Frameworks/WebKit.framework

Availability Available in Mac OS X v10.5 and later.

Declared in DOMExtensions.h

Companion guides WebKit DOM Programming Topics

WebKit Objective-C Programming Guide

Overview

Additions to the DOMHTMLDocument class to create document fragments.

Tasks

Creating Document Fragments

- createDocumentFragmentWithMarkupString:baseURL: (page 5)
 - Creates a document fragment containing the given HTML markup.
- createDocumentFragmentWithText: (page 6)

Creates a document fragment containing the given text.

Instance Methods

createDocumentFragmentWithMarkupString:baseURL:

Creates a document fragment containing the given HTML markup.

(DOMDocumentFragment *)createDocumentFragmentWithMarkupString:(NSString *)markupString baseURL:(NSURL *)baseURL

Discussion

This is a convenience method for the createDocumentFragment method in DOMDocument. It creates a fragment that has the HTML markup parsed into child nodes of the fragment using the <code>baseURL</code> to resolve any relative paths for images or other resources.

Availability

Available in Mac OS X v10.5 and later.

Declared In

DOMExtensions.h

createDocumentFragmentWithText:

Creates a document fragment containing the given text.

- (DOMDocumentFragment *) createDocumentFragmentWithText: (NSString *) text

Discussion

This is a convenience method for the createDocumentFragment method in DOMDocument. This method creates a fragment that contains the supplied plain text.

Availability

Available in Mac OS X v10.5 and later.

Declared In

DOMExtensions.h
