Overview

`NSCompoundPredicate` is a subclass of `NSPredicate` used to represent logical “gate” operations (AND/OR/NOT) and comparison operations.

Comparison operations are based on two expressions, as represented by instances of the `NSExpression` class. Expressions are created for constant values, key paths, and so on.

On Mac OS X v10.5 and later, `NSCompoundPredicate` allows you to create an AND or OR compound predicate (but not a NOT compound predicate) using an array with 0, 1, or more elements. A compound predicate with 0 elements evaluates to TRUE, and a compound predicate with a single sub-predicate evaluates to the truth of its sole subpredicate.

Tasks

Constructors

+ [andPredicateWithSubpredicates:](#) (page 6)

Returns a new predicate formed by AND-ing the predicates in a given array.

- + `notPredicateWithSubpredicate:` (page 6)
Returns a new predicate formed by NOT-ing a given predicate.
- + `orPredicateWithSubpredicates:` (page 7)
Returns a new predicate formed by OR-ing the predicates in a given array.
- `initWithType:subpredicates:` (page 8)
Returns the receiver initialized to a given type using predicates from a given array.

Getting Information About a Compound Predicate

- `compoundPredicateType` (page 7)
Returns the predicate type for the receiver.
- `subpredicates` (page 8)
Returns the array of the receiver's subpredicates.

Class Methods

andPredicateWithSubpredicates:

Returns a new predicate formed by AND-ing the predicates in a given array.

```
+ (NSPredicate *)andPredicateWithSubpredicates:(NSArray *)subpredicates
```

Parameters

subpredicates

An array of NSPredicate objects.

Return Value

A new predicate formed by AND-ing the predicates specified by *subpredicates*.

Availability

Available in Mac OS X v10.4 and later.

Related Sample Code

SpotlightFortunes

Declared In

NSCompoundPredicate.h

notPredicateWithSubpredicate:

Returns a new predicate formed by NOT-ing a given predicate.

```
+ (NSPredicate *)notPredicateWithSubpredicate:(NSPredicate *)predicate
```

Parameters

predicate

A predicate.

Return Value

A new predicate formed by NOT-ing the predicate specified by *predicate*.

Availability

Available in Mac OS X v10.4 and later.

Declared In

NSCompoundPredicate.h

orPredicateWithSubpredicates:

Returns a new predicate formed by OR-ing the predicates in a given array.

+ (NSPredicate *)orPredicateWithSubpredicates:(NSArray *)*subpredicates*

Parameters

subpredicates

An array of NSPredicate objects.

Return Value

A new predicate formed by OR-ing the predicates specified by *subpredicates*.

Availability

Available in Mac OS X v10.4 and later.

Related Sample Code

Declared In

NSCompoundPredicate.h

Instance Methods

compoundPredicateType

Returns the predicate type for the receiver.

- (NSCompoundPredicateType)compoundPredicateType

Return Value

The predicate type for the receiver.

Availability

Available in Mac OS X v10.4 and later.

Declared In

NSCompoundPredicate.h

initWithType:subpredicates:

Returns the receiver initialized to a given type using predicates from a given array.

```
- (id)initWithType:(NSCompoundPredicateType)type subpredicates:(NSArray
*)subpredicates
```

Parameters

type

The type of the new predicate.

subpredicates

An array of NSPredicate objects.

Return Value

The receiver initialized with its type set to *type* and subpredicates array to *subpredicates*.

Availability

Available in Mac OS X v10.4 and later.

Related Sample Code

PredicateEditorSample

Declared In

NSCompoundPredicate.h

subpredicates

Returns the array of the receiver's subpredicates.

```
- (NSArray *)subpredicates
```

Return Value

The array of the receiver's subpredicates.

Availability

Available in Mac OS X v10.4 and later.

Declared In

NSCompoundPredicate.h

Constants

Compound Predicate Types

These constants describe the possible types of NSCompoundPredicate.

```
typedef enum {  
    NSNotPredicateType = 0,  
    NSAndPredicateType,  
    NSOrPredicateType,  
} NSCompoundPredicateType;
```

Constants

NSNotPredicateType

A logical NOT predicate.

Available in Mac OS X v10.4 and later.

Declared in NSCompoundPredicate.h.

NSAndPredicateType

A logical AND predicate.

Available in Mac OS X v10.4 and later.

Declared in NSCompoundPredicate.h.

NSOrPredicateType

A logical OR predicate.

Available in Mac OS X v10.4 and later.

Declared in NSCompoundPredicate.h.

Declared In

NSCompoundPredicate.h

Document Revision History

This table describes the changes to *NSCompoundPredicate Class Reference*.
