[NSIndexPath Class Reference](#) 7

[Figure 1](#) [Index path 1.4.3.2](#) 7

NSIndexPath Class Reference

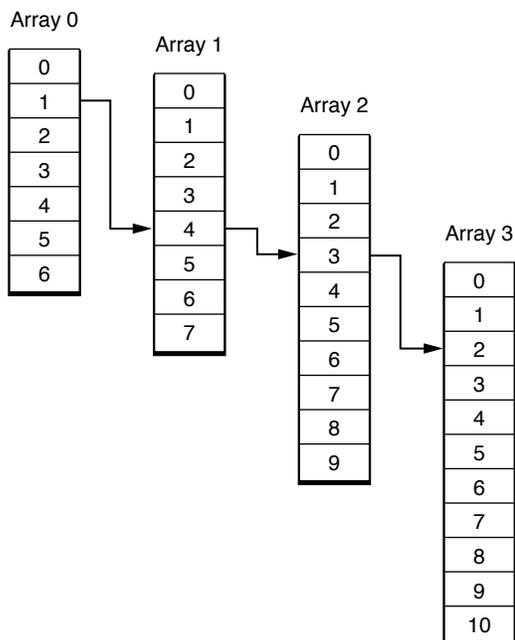

Inherits from	NSObject
Conforms to	NSCoding NSCopying NSObject (NSObject)
Framework	/System/Library/Frameworks/Foundation.framework
Availability	Available in Mac OS X v10.4 and later.
Declared in	NSIndexPath.h

Overview

The `NSIndexPath` class represents the path to a specific node in a tree of nested array collections. This path is known as an **index path**.

Each index in an index path represents the index into an array of children from one node in the tree to another, deeper, node. For example, the index path `1.4.3.2` specifies the path shown in Figure 1.

Figure 1 Index path 1.4.3.2

`NSIndexPath` objects are uniqued and shared. If an index path containing the specified index or indexes already exists, that object is returned instead of a new instance.

Adopted Protocols

NSCoding

- `encodeWithCoder:`
- `initWithCoder:`

NSCopying

- `copyWithZone:`

Tasks

Creating Index Paths

- + `indexPathWithIndex:` (page 9)
Creates an one-node index path.
- + `indexPathWithIndexes:length:` (page 9)
Creates an index path with one or more nodes.
- `initWithIndex:` (page 12)
Initializes an allocated `NSIndexPath` (page 7) object with a one-node index path.
- `initWithIndexes:length:` (page 12)
Initializes an allocated `NSIndexPath` (page 7) object with an index path of a specific length.

Querying Index Paths

- `getIndexes:` (page 10)
Provides a reference to the receiver's indexes.
- `indexAtPosition:` (page 11)
Provides the index at a particular node in the receiver.
- `indexPathByAddingIndex:` (page 11)
Provides an index path containing the indexes in the receiver and another index.
- `indexPathByRemovingLastIndex` (page 11)
Provides an index path with the indexes in the receiver, excluding the last one.
- `length` (page 13)
Provides the number of indexes in the receiver.

Comparing Index Paths

- [compare:](#) (page 10)
Indicates the depth-first traversal order of the receiver and another index path.

Class Methods

indexPathWithIndex:

Creates an one-node index path.

```
+ (id)indexPathWithIndex:(NSUInteger) index
```

Parameters

index

Index of the item in node 0 to point to.

Return Value

One-node index path with *index*.

Availability

Available in Mac OS X v10.4 and later.

See Also

- [initWithIndex:](#) (page 12)

Declared In

NSIndexPath.h

indexPathWithIndexes:length:

Creates an index path with one or more nodes.

```
+ (id)indexPathWithIndexes:(NSUInteger *) indexes length:(NSUInteger) length
```

Parameters

indexes

Array of indexes to make up the index path.

length

Number of nodes to include in the index path.

Return Value

Index path with *indexes* up to *length*.

Availability

Available in Mac OS X v10.4 and later.

See Also

- [initWithIndexes:length:](#) (page 12)

Declared In
 NSIndexPath.h

Instance Methods

compare:

Indicates the depth-first traversal order of the receiver and another index path.

- (NSComparisonResult)compare:(NSIndexPath *)indexPath

Parameters

indexPath

Index path to compare.

This value must not be `nil`. If the value is `nil`, the behavior is undefined and may change in future versions of Mac OS X.

Return Value

The depth-first traversal ordering of the receiver and *indexPath*.

- `NSOrderedAscending`: The receiver comes before *indexPath*.
- `NSOrderedDescending`: The receiver comes after *indexPath*.
- `NSOrderedSame`: The receiver and *indexPath* are the same index path.

Availability

Available in Mac OS X v10.4 and later.

Declared In
 NSIndexPath.h

getIndexes:

Provides a reference to the receiver's indexes.

- (void)getIndexes:(NSUInteger *)indexes

Parameters

indexes

Pointer to an unsigned integer array. On return, the receiver indexes.

Availability

Available in Mac OS X v10.4 and later.

Declared In
 NSIndexPath.h

indexPathAtPosition:

Provides the index at a particular node in the receiver.

- (NSUInteger)indexPathAtPosition:(NSUInteger)*node*

Parameters

node

Index value of the desired node. Node numbering starts at zero.

Return Value

Index value at *node*.

Availability

Available in Mac OS X v10.4 and later.

Declared In

NSIndexPath.h

indexPathByAddingIndex:

Provides an index path containing the indexes in the receiver and another index.

- (NSIndexPath *)indexPathByAddingIndex:(NSUInteger)*index*

Parameters

index

Index to append to the receiver's indexes.

Return Value

New [NSIndexPath](#) (page 7) object containing the receiver's indexes and *index*.

Availability

Available in Mac OS X v10.4 and later.

See Also

- [indexPathByRemovingLastIndex](#) (page 11)

Declared In

NSIndexPath.h

indexPathByRemovingLastIndex

Provides an index path with the indexes in the receiver, excluding the last one.

- (NSIndexPath *)indexPathByRemovingLastIndex

Return Value

New index path with the receiver's indexes, excluding the last one.

Discussion

Returns an empty [NSIndexPath](#) instance if the receiver's length is 1 or less.

Special Considerations

On Mac OS X 10.4 and earlier this method returns `nil` when the length of the receiver is 1 or less. On Mac OS X 10.5 and later this method will never return `nil`.

Availability

Available in Mac OS X v10.4 and later.

See Also

- [indexPathByAddingIndex:](#) (page 11)

Declared In

NSIndexPath.h

initWithIndex:

Initializes an allocated [NSIndexPath](#) (page 7) object with a one-node index path.

```
- (id)initWithIndex:(NSUInteger) index
```

Parameters

index

Index of the item in node 0 to point to.

Return Value

Initialized [NSIndexPath](#) (page 7) object representing a one-node index path with *index*.

Availability

Available in Mac OS X v10.4 and later.

See Also

+ [indexPathWithIndex:](#) (page 9)

Declared In

NSIndexPath.h

initWithIndexes:length:

Initializes an allocated [NSIndexPath](#) (page 7) object with an index path of a specific length.

```
- (id)initWithIndexes:(NSUInteger *) indexes length:(NSUInteger) length
```

Parameters

indexes

Array of indexes to make up the index path.

length

Number of nodes to include in the index path.

Return Value

Initialized [NSIndexPath](#) (page 7) object with *indexes* up to *length*.

Availability

Available in Mac OS X v10.4 and later.

See Also

+ [indexPathWithIndexes:length:](#) (page 9)

Declared In

NSIndexPath.h

length

Provides the number of indexes in the receiver.

- (NSUInteger)length

Return Value

Number of indexes in the receiver.

Availability

Available in Mac OS X v10.4 and later.

Declared In

NSIndexPath.h

Document Revision History

This table describes the changes to *NSIndexPath Class Reference*.

Date	Notes
2008-10-15	Clarified <code>indexPathAtPosition:</code> description.
2008-09-09	Added return considerations to <code>indexPathByRemovingLastIndex</code> method.
2007-10-31	Updated the description of the <code>compare:</code> method.
2007-03-26	Made editorial improvements.
2006-05-23	First publication of this content as a separate document.
