NSURLCredential Class Reference

| | |
|------------------------|--|
| Inherits from | NSObject |
| Conforms to | NSCopying NSObject (NSObject) |
| Framework | /System/Library/Frameworks/Foundation.framework |
| Availability | Available in Mac OS X v10.2 with Safari 1.0 installed. Available in Mac OS X v10.2.7 and later. |
| Companion guide | URL Loading System |
| Declared in | NSURLCredential.h |

Overview

`NSURLCredential` is an immutable object representing an authentication credential consisting of the user name, a password and the type of persistent storage to use, if any.

Adopted Protocols

NSCopying
`copyWithZone:`

Tasks

Creating a Credential

- + `credentialWithUser:password:persistence:` (page 6)
Creates and returns an `NSURLCredential` object with a given user name and password using a given persistence setting.
- `initWithUser:password:persistence:` (page 7)
Returns an `NSURLCredential` object initialized with a given user name and password using a given persistence setting.

Getting Credential Properties

- [hasPassword](#) (page 7)
Returns a Boolean value that indicates whether the receiver has a password.
- [password](#) (page 8)
Returns the receiver's password.
- [persistence](#) (page 8)
Returns the receiver's persistence setting.
- [user](#) (page 8)
Returns the receiver's user name.

Class Methods

credentialWithUser:password:persistence:

Creates and returns an `NSURLCredential` object with a given user name and password using a given persistence setting.

```
+ (NSURLCredential *)credentialWithUser:(NSString *)user password:(NSString *)password persistence:(NSURLCredentialPersistence)persistence
```

Parameters

user

The user for the credential.

password

The password for *user*.

persistence

The persistence setting for the credential.

Return Value

An `NSURLCredential` object with user name *user*, password *password*, and using persistence setting *persistence*.

Discussion

If *persistence* is `NSURLCredentialPersistencePermanent` the credential is stored in the keychain.

Availability

Available in Mac OS X v10.2 with Safari 1.0 installed.

Available in Mac OS X v10.2.7 and later.

See Also

- [initWithUser:password:persistence:](#) (page 7)

Declared In

`NSURLCredential.h`

Instance Methods

hasPassword

Returns a Boolean value that indicates whether the receiver has a password.

- (BOOL)hasPassword

Return Value

YES if the receiver has a password, NO otherwise.

Discussion

This method does not attempt to retrieve the password.

If this credential's password is stored in the user's keychain, [password](#) (page 8) may return NO even if this method returns YES, since getting the password may fail, or the user may refuse access.

Availability

Available in Mac OS X v10.2 with Safari 1.0 installed.

Available in Mac OS X v10.2.7 and later.

Declared In

NSURLCredential.h

initWithUser:password:persistence:

Returns an `NSURLCredential` object initialized with a given user name and password using a given persistence setting.

```
- (id)initWithUser:(NSString *)user password:(NSString *)password
  persistence:(NSURLCredentialPersistence)persistence
```

Parameters

user

The user for the credential.

password

The password for *user*.

persistence

The persistence setting for the credential.

Return Value

An `NSURLCredential` object initialized with user name *user*, password *password*, and using persistence setting *persistence*.

Discussion

If *persistence* is `NSURLCredentialPersistencePermanent` the credential is stored in the keychain.

Availability

Available in Mac OS X v10.2 with Safari 1.0 installed.

Available in Mac OS X v10.2.7 and later.

See Also

+ [credentialWithUser:password:persistence:](#) (page 6)

Declared In

NSURLCredential.h

password

Returns the receiver's password.

- (NSString *)password

Return Value

The receiver's password.

Discussion

If the password is stored in the user's keychain, this method may result in prompting the user for access.

Availability

Available in Mac OS X v10.2 with Safari 1.0 installed.

Available in Mac OS X v10.2.7 and later.

See Also

- [hasPassword](#) (page 7)

Declared In

NSURLCredential.h

persistence

Returns the receiver's persistence setting.

- (NSURLCredentialPersistence)persistence

Return Value

The receiver's persistence setting.

Availability

Available in Mac OS X v10.2 with Safari 1.0 installed.

Available in Mac OS X v10.2.7 and later.

Declared In

NSURLCredential.h

user

Returns the receiver's user name.

- (NSString *)user

Return Value

The receiver's user name.

Availability

Available in Mac OS X v10.2 with Safari 1.0 installed.

Available in Mac OS X v10.2.7 and later.

Declared In

NSURLCredential.h

Constants

NSURLCredentialPersistence

These constants specify how long the credential will be kept.

```
typedef enum {
    NSURLCredentialPersistenceNone,
    NSURLCredentialPersistenceForSession,
    NSURLCredentialPersistencePermanent
} NSURLCredentialPersistence;
```

Constants

NSURLCredentialPersistenceNone

Credential won't be stored.

Available in Mac OS X v10.2 and later.

Declared in NSURLCredential.h.

NSURLCredentialPersistenceForSession

Credential will be stored only for this session.

Available in Mac OS X v10.2 and later.

Declared in NSURLCredential.h.

NSURLCredentialPersistencePermanent

Credential will be stored in the user's keychain and shared with other applications.

Available in Mac OS X v10.2 and later.

Declared in NSURLCredential.h.

Availability

Available in Mac OS X v10.2 with Safari 1.0 installed.

Available in Mac OS X v10.2.7 and later.

Declared In

NSURLCredential.h

Document Revision History

This table describes the changes to *NSURLCredential Class Reference*.

| Date | Notes |
|------------|---|
| 2006-06-28 | Updated the Constants section to conform to reference consistency guidelines. |
| 2006-05-23 | First publication of this content as a separate document. |
