# IMKMouseHandling Protocol Reference

---

<b>Adopted by</b>	IMKInputController
<b>Framework</b>	System/Library/Frameworks/InputMethodKit.framework
<b>Availability</b>	Available in Mac OS X v10.5 and later.
<b>Declared in</b>	IMKInputController.h

## Overview

The `IMKMouseHandling` protocol defines methods that your input method can implement to handle mouse events.

## Tasks

### Handling Mouse Events

- [mouseDownOnCharacterIndex:coordinate:withModifier:continueTracking:client:](#) (page 5)  
Handles mouse-down event send to an input method.
- [mouseUpOnCharacterIndex:coordinate:withModifier:client:](#) (page 7)  
Handles a mouse-up event sent to an input method.
- [mouseMovedOnCharacterIndex:coordinate:withModifier:client:](#) (page 6)  
Handles a mouse-moved event sent to an input method.

## Instance Methods

### **mouseDownOnCharacterIndex:coordinate:withModifier:continueTracking:client:**

Handles mouse-down event send to an input method.

```
-(BOOL)mouseDownOnCharacterIndex:(NSUInteger)index coordinate:(NSPoint)point  
withModifier:(NSUInteger)flags continueTracking:(BOOL*)keepTracking  
client:(id)sender
```

**Parameters***index*

The index within the sender's text storage where the mouse-down event occurred.

*point*

The point at which the mouse-down event occurred.

*flags*

The modifier keys.

*keepTracking*

Set this parameter to YES if you want to receive subsequent mouse-moved and mouse -up events.

*sender*

The client object.

**Return Value**

YES if handled; otherwise NO.

**Discussion**

Implement this method if your input method handles mouse-down events.

**Availability**

Available in Mac OS X v10.5 and later.

**Declared In**

IMKInputController.h

**mouseMovedOnCharacterIndex:coordinate:withModifier:client:**

Handles a mouse-moved event sent to an input method.

```
-(BOOL)mouseMovedOnCharacterIndex:(NSUInteger)index coordinate:(NSPoint)point
withModifier:(NSUInteger)flags client:(id)sender
```

**Parameters***index*

The index within the sender's text storage where the mouse-moved event occurred.

*point*

The point at which the mouse-moved event occurred.

*flags*

The modifier keys.

*sender*

The client object.

**Return Value**

YES if handled; otherwise NO.

**Discussion**

Implement this method if your input method handles mouse-moved events.

**Availability**

Available in Mac OS X v10.5 and later.

**Declared In**

IMKInputController.h

## **mouseUpOnCharacterIndex:coordinate:withModifier:client:**

Handles a mouse-up event sent to an input method.

```
-(BOOL)mouseUpOnCharacterIndex:(NSUInteger)index coordinate:(NSPoint)point  
withModifier:(NSUInteger)flags client:(id)sender
```

### **Parameters**

*index*

The index within the sender's text storage where the mouse-up event occurred.

*point*

The point at which the mouse-up event occurred.

*flags*

The modifier keys.

*sender*

The client object.

### **Return Value**

YES if handled; otherwise NO.

### **Discussion**

Implement this method if your input method handles mouse-up events.

### **Availability**

Available in Mac OS X v10.5 and later.

### **Declared In**

IMKInputController.h

# Document Revision History

---

This table describes the changes to *IMKMouseHandling Protocol Reference*.

Date	Notes
2007-06-05	New document that describes the protocol used to receive mouse events for an input method client session.
