QCCompositionParameterView Class Reference

Inherits from	NSView : NSResponder : NSObject
Conforms to	NSAnimatablePropertyContainer (NSView) NSCoding (NSResponder) NSObject (NSObject)
Framework	/System/Library/Frameworks/Quartz.framework/Frameworks/QuartzComposer.framework
Availability	Available in Mac OS X v10.5 and later.
Companion guide	Quartz Composer Programming Guide
Declared in	QCCompositionParameterView.h

Overview

The `QCCompositionParameterView` class allows users to edit, in real time, the input parameters of a composition. The composition can be rendering in any of the following objects: `QCRenderer`, `QCView`, or `QCCompositionLayer`.

Tasks

Getting and Setting the Renderer

- [setCompositionRenderer:](#) (page 8)
Sets the composition parameter view for editing the input parameters of the provided renderer object.
- [compositionRenderer](#) (page 6)
Returns the renderer object associated with the composition parameter view.

Checking for Input Parameters

- [hasParameters](#) (page 7)
Checks whether the composition that is currently edited by the composition parameter view has any input parameters.

Setting and Retrieving the Delegate

- [setDelegate:](#) (page 8)
Sets the composition parameter view delegate.
- [delegate](#) (page 7)
Returns the composition parameter view delegate.

Managing Background Drawing

- [setDrawsBackground:](#) (page 9)
Sets whether the composition parameter view draws its background.
- [drawsBackground](#) (page 7)
Returns whether the composition parameter view draws its background.

Setting and Getting the Background Color

- [setBackgroundCoLor:](#) (page 8)
Sets the background color of the composition parameter view.
- [backgroundCoLor](#) (page 6)
Retrieves the background color of the composition parameter view.

Instance Methods

backgroundColor

Retrieves the background color of the composition parameter view.

- (NSColor*) backgroundColor;

Return Value

The color of the background.

Availability

Available in Mac OS X v10.5 and later.

Declared In

QCCompositionParameterView.h

compositionRenderer

Returns the renderer object associated with the composition parameter view.

- (id<QCCompositionRenderer>) compositionRenderer

Return Value

A renderer object or `nil`, if the composition parameter view is not set to a renderer object.

Availability

Available in Mac OS X v10.5 and later.

See Also

- [setCompositionRenderer:](#) (page 8)

Declared In

QCCompositionParameterView.h

delegate

Returns the composition parameter view delegate.

```
- (id) delegate;
```

Return Value

The composition parameter view delegate.

Availability

Available in Mac OS X v10.5 and later.

Declared In

QCCompositionParameterView.h

drawsBackground

Returns whether the composition parameter view draws its background.

```
- (BOOL) drawsBackground;
```

Return Value

YES if the view draws its background; otherwise NO.

Availability

Available in Mac OS X v10.5 and later.

Declared In

QCCompositionParameterView.h

hasParameters

Checks whether the composition that is currently edited by the composition parameter view has any input parameters.

```
- (BOOL) hasParameters
```

Return Value

YES if the composition has any input parameters.

Availability

Available in Mac OS X v10.5 and later.

Declared In

QCCompositionParameterView.h

setBackground-color:

Sets the background color of the composition parameter view.

- (void) setBackgroundColor:(NSColor*)color;

Parameters

color

The color to set.

Availability

Available in Mac OS X v10.5 and later.

Declared In

QCCompositionParameterView.h

setCompositionRenderer:

Sets the composition parameter view for editing the input parameters of the provided renderer object.

- (void) setCompositionRenderer:(id<QCCompositionRenderer>)renderer

Parameters

renderer

A QCCompositionRenderer object, either QCVIEW, QCRenderer, or QCCompositionLayer. Pass nil to unset this renderer.

Discussion

If the renderer is a QCVIEW object, the view track the composition.

Availability

Available in Mac OS X v10.5 and later.

See Also

- [compositionRenderer](#) (page 6)

Declared In

QCCompositionParameterView.h

setDelegate:

Sets the composition parameter view delegate.

- (void) setDelegate:(id)delegate;

Parameters

delegate

The delegate for the composition parameter view.

Availability

Available in Mac OS X v10.5 and later.

Declared In

QCCompositionParameterView.h

setDrawsBackground:

Sets whether the composition parameter view draws its background.

- (void) setDrawsBackground:(BOOL)flag;

Parameters

flag

YES for the view to draw its background; otherwise NO.

Availability

Available in Mac OS X v10.5 and later.

Declared In

QCCompositionParameterView.h

Document Revision History

This table describes the changes to *QCCompositionParameterView Class Reference*.

Date	Notes
2007-05-09	New document that describes the class used to edit the input parameters of a composition in a view.
