PDFAnnotationStamp Class Reference

Inherits from	PDFAnnotation : NSObject
Conforms to	NSObject (NSObject)
Framework	Library/Frameworks/Quartz.framework/Frameworks/PDFKit.framework
Availability	Available in Mac OS X v10.5 and later.
Declared in	PDFAnnotationStamp.h

Overview

A `PDFAnnotationStamp` object allows you to display a word or phrase, such as “Confidential,” in a PDF page.

A `PDFAnnotationStamp` object should have an appearance stream associated with it; otherwise, nothing useful is rendered.

Tasks

Accessing and Setting the Stamp Annotation

- [name](#) (page 5)
Returns name associated with the stamp annotation.
- [setName:](#) (page 6)
Sets the name associated with the stamp annotation.

Instance Methods

name

Returns name associated with the stamp annotation.

- (NSString *)name

Discussion

Note that the name value of the stamp annotation is not necessarily identical to the user-visible appearance of the stamp annotation. For example, a stamp annotation that displays “Confidential” on a PDF page may not have a name value of “Confidential”.

Availability

Available in Mac OS X v10.5 and later.

See Also

- [setName:](#) (page \$@)

Declared In

PDFAnnotationStamp.h

setName:

Sets the name associated with the stamp annotation.

```
- (NSString *)setName:(NSString *)name
```

Discussion

The name must be representable in ASCII. You can set a stamp annotation’s name to help you identify it, but that name is not displayed on the PDF page. You must provide the string you want displayed on the page, such as “Draft” or “Top Secret”, in the appearance stream for the annotation.

Availability

Available in Mac OS X v10.5 and later.
