PDFAnnotationTextWidget Class Reference

| | |
|----------------------|---|
| Inherits from | PDFAnnotation : NSObject |
| Conforms to | NSObject (NSObject) |
| Framework | Library/Frameworks/Quartz.framework/Frameworks/PDFKit.framework |
| Availability | Available in Mac OS X v10.4 and later. |
| Declared in | PDFAnnotationTextWidget.h |

Overview

A `PDFAnnotationTextWidget` object allows you to manage the appearance and content of text fields.

`PDFAnnotationTextWidget` objects support interactive forms in a PDF document. This object is comparable to an editable `NSTextField` in Cocoa or an edit text view in Carbon.

Tasks

Working with Annotation Strings

- [stringValue](#) (page 12)
Returns the string assigned to the annotation.
- [setStringValue:](#) (page 12)
Sets the string for the annotation.
- [maxLength](#) (page 8)
Returns the maximum number of characters allowed in the annotation string.
- [setMaxLength:](#) (page 11)
Sets the maximum number of characters allowed in the annotation string.

Managing the Font and Font Color

- [font](#) (page 7)
Returns the font used for the annotation's text field.
- [setFont:](#) (page 10)
Sets the font used in the text field of the annotation.

- [fontColor](#) (page 8)
Returns the font color used for the annotation's text field.
- [setFontColor:](#) (page 11)
Sets the font color used for the annotation's text field.

Managing Background Color, Alignment, and Rotation

- [backgroundColor](#) (page 7)
Returns the background color of the annotation text field.
- [setBackgroundCoLor:](#) (page 9)
Sets the background color of the annotation text field.
- [alignment](#) (page 6)
Returns the text alignment setting for the annotation.
- [setAlignment:](#) (page 9)
Sets the text alignment for the annotation.
- [rotation](#) (page 9)
Returns the rotation angle of the annotation text field in degrees.
- [setRotation:](#) (page 11)
Sets the rotation angle of the annotation text field in degrees.

Working with Field Names

- [fieldName](#) (page 7)
Returns the internal name for the annotation text field.
- [setFieldName:](#) (page 10)
Sets the internal field name for the annotation text field.

Instance Methods

alignment

Returns the text alignment setting for the annotation.

- (NSTextAlignment)alignment

Return Value

The text alignment value for the annotation. Supported alignment values are `NSLeftTextAligment`, `NSRightTextAligment`, and `NSCenterTextAligment`.

Availability

Available in Mac OS X v10.4 and later.

See Also

- [setAlignment:](#) (page 9)

Declared In

PDFAnnotationTextWidget.h

backgroundColor

Returns the background color of the annotation text field.

- (NSColor *)backgroundColor

Return Value

The background color of the annotation's text field.

Availability

Available in Mac OS X v10.5 and later.

See Also- [setBackground-color:](#) (page \$@)**Declared In**

PDFAnnotationTextWidget.h

fieldName

Returns the internal name for the annotation text field.

- (NSString *)fieldName

Return Value

The internal name for the annotation text field.

Discussion

Field names are optional, internal names that identify text fields in a PDF form. You use field names with the `PDFActionResetForm` action.

Note that multiple `PDFAnnotationTextWidget` objects with the same field name always have the same text associated with that field name. When text is entered into one of the objects, the text associated with that field name is changed in all objects. If you need to ensure unique text for a `PDFAnnotationTextWidget` object, you must give it a unique field name (you can use [setFieldName:](#) (page 10) to do this).

Availability

Available in Mac OS X v10.5 and later.

See Also- [setFieldName:](#) (page \$@)**Declared In**

PDFAnnotationTextWidget.h

font

Returns the font used for the annotation's text field.

- (NSFont *)font

Return Value

The font used for text in the annotation's text field.

Availability

Available in Mac OS X v10.4 and later.

See Also

- [setFont:](#) (page 10)

Declared In

PDFAnnotationTextWidget.h

fontColor

Returns the font color used for the annotation's text field.

- (NSColor *)fontColor

Return Value

The font color used for text in the annotation's text field.

Availability

Available in Mac OS X v10.5 and later.

See Also

- [setFontColor:](#) (page \$@)

Declared In

PDFAnnotationTextWidget.h

maxLength

Returns the maximum number of characters allowed in the annotation string.

- (NSInteger)maxLength

Return Value

The maximum number of characters allowed in the annotations string. A return value of 0 means that there is no specified maximum.

Availability

Available in Mac OS X v10.5 and later.

See Also

- [setMaxLength:](#) (page \$@)

Declared In

PDFAnnotationTextWidget.h

rotation

Returns the rotation angle of the annotation text field in degrees.

```
- (int)rotation
```

Return Value

The rotation angle of the annotation text field in degrees.

Discussion

Note that the rotation value is a positive multiple of 90, such as 0, 90, 180, or 270. The rotation of annotation text fields with negative rotation is converted to a corresponding positive rotation. For example, -90 is changed to 270.

Availability

Available in Mac OS X v10.5 and later.

See Also

- [setRotation:](#) (page \$@)

Declared In

PDFAnnotationTextWidget.h

setAlignment:

Sets the text alignment for the annotation.

```
- (void)setAlignment:(NSTextAlignment)alignment
```

Parameters

alignment

The text-alignment value to be used for the annotation. Possible values are `NSLeftTextAlignment`, `NSRightTextAlignment`, and `NSCenterTextAlignment`.

Availability

Available in Mac OS X v10.4 and later.

See Also

- [alignment](#) (page 6)

Declared In

PDFAnnotationTextWidget.h

setBackground-color:

Sets the background color of the annotation text field.

```
- (void)setBackgroundColor:(NSColor *)color
```

Parameters

color

The color to be used in the background of the annotation's text field.

Availability

Available in Mac OS X v10.5 and later.

See Also

- [backgroundColor](#) (page \$@)

Declared In

PDFAnnotationTextWidget.h

setFieldName:

Sets the internal field name for the annotation text field.

```
- (void)setFieldName:(NSString *)name
```

Parameters

name

The internal field name to be used for the annotation text field.

Discussion

Field names are optional, internal names that identify text fields in a PDF form. You use field names with the `PDFActionResetForm` action.

Note that multiple `PDFAnnotationTextWidget` objects with the same field name always have the same text associated with that field name. When text is entered into one of the objects, the text associated with that field name is changed in all objects. If you need to ensure unique text for a `PDFAnnotationTextWidget` object, you must give it a unique field name.

Availability

Available in Mac OS X v10.5 and later.

See Also

- [fieldName](#) (page \$@)

Declared In

PDFAnnotationTextWidget.h

setFont:

Sets the font used in the text field of the annotation.

```
- (void)setFont:(NSFont *)font
```

Parameters

font

The font to be used in the annotation's text field.

Availability

Available in Mac OS X v10.4 and later.

See Also

- [font](#) (page 7)

Declared In

PDFAnnotationTextWidget.h

setFontColor:

Sets the font color used for the annotation's text field.

- (void)setFontColor:(NSColor *)*color***Parameters***color*

The font color to be used in the annotation's text field.

Availability

Available in Mac OS X v10.5 and later.

See Also- [fontColor](#) (page \$@)**Declared In**

PDFAnnotationTextWidget.h

setMaximumLength:

Sets the maximum number of characters allowed in the annotation string.

- (void)setMaximumLength:(NSUInteger)*maxLen***Parameters***maxLen*

The maximum number of characters allowed in the annotation string. Pass 0 to indicate that there is no specified maximum.

Availability

Available in Mac OS X v10.5 and later.

See Also- [maxLength](#) (page \$@)**Declared In**

PDFAnnotationTextWidget.h

setRotation:

Sets the rotation angle of the annotation text field in degrees.

- (void)setRotation:(int)*rotation*

Parameters*rotation*

The rotation angle to be applied to the annotation text field, in degrees. The rotation angle must be a positive or negative multiple of 90 (negative angles are converted to their positive equivalents; for example -90 is changed to 270).

Availability

Available in Mac OS X v10.5 and later.

See Also

- [rotation](#) (page \$@)

Declared In

PDFAnnotationTextWidget.h

setStringValue:

Sets the string for the annotation.

```
- (void)setStringValue:(NSString *)value
```

Parameters*value*

The string to be assigned to the annotation.

Availability

Available in Mac OS X v10.4 and later.

See Also

- [stringValue](#) (page 12)

Declared In

PDFAnnotationTextWidget.h

stringValue

Returns the string assigned to the annotation.

```
- (NSString *)stringValue
```

Return Value

The string assigned to the annotation.

Availability

Available in Mac OS X v10.4 and later.

See Also

- [setStringValue:](#) (page 12)

Declared In

PDFAnnotationTextWidget.h

Document Revision History

This table describes the changes to *PDFAnnotationTextWidget Class Reference*.

| Date | Notes |
|------------|---|
| 2007-12-11 | Added information on the relationship of text widgets with the same field name. |
| 2007-10-31 | Updated for Mac OS X v10.5. |
| 2006-05-23 | First publication of this content as a separate document. |
