Introduction to 15-inch PowerBook G4 Developer Note

This developer note is a technical description of the 15-inch PowerBook G4. The note provides information about the computer's internal design, input-output features, and expansion capabilities.

Note: This developer note has been updated to include information about the latest product features and configurations.

Who Should Read This Document?

This developer note is intended to help hardware and software developers design products that are compatible with the Macintosh products described here. If you are not already familiar with Macintosh computers or if you would like additional technical information, you may wish to read the supplementary reference documents described in [Appendix A](#) (page 61).

Organization of This Document

The information in this note is arranged in four chapters and two appendices.

- [Chapter 1, "Introduction"](#) (page 11) introduces the 15-inch PowerBook G4 and describes its features.
- [Chapter 2, "Architecture"](#) (page 19) describes the internal logic of the computer, including the main ICs that appear in the block diagram.
- [Chapter 3, "Devices and Ports"](#) (page 27) describes the standard I/O ports and the built-in I/O devices.
- [Chapter 4, "Expansion Features"](#) (page 55) describes the expansion features of interest to developers. It includes development guides for expansion-bay devices, the RAM expansion modules, and the PC Card slot.
- [Appendix A](#) (page 61) contains links to supplemental reference documents.
- [Appendix B](#) (page 67) is a list of the abbreviations used in this developer note.

INTRODUCTION

Introduction to 15-inch PowerBook G4 Developer Note

Overview to the 15-inch PowerBook G4

This chapter outlines the features of the 15-inch PowerBook G4, with emphasis on the changes from the previous models.

New Features

The features that have changed are listed here along with references to the sections that describe them. For a quick summary of the changes, see [Table 1-1](#) (page 12).

- **Processor:** The 15-inch PowerBook G4 has a PowerPC G4 microprocessor running at a clock speed of 1 GHz or 1.25 GHz. For more information, see [“PowerPC G4 Microprocessor”](#) (page 21).
- **Enclosure:** The 15-inch PowerBook G4 has a lightweight aluminum alloy enclosure.
- **Graphics IC and memory:** The ATI Mobility Radeon 9600 graphics processor operates on the AGP4x bus with 64 MB of DDR RAM. For more information, see [“Video Display Subsystem”](#) (page 23).
- **System bus:** The speed of the system bus is 167 MHz in both models.
- **Cache:** Internal to the processor IC is a 512 KB L2 cache. See [“Level 2 Cache”](#) (page 21).
- **RAM:** The computer has two SO-DIMM expansion slots for DDR SDRAM modules. The computer comes with 256 MB of DDR SDRAM installed on the 1 GHz configuration and 512 MB of DDR SDRAM installed on the 1.25 GHz configuration. RAM is expandable up to 2 GB. See [“RAM Expansion Slots”](#) (page 55).
- **USB 2.0 ports:** The computer has two USB 2.0 ports for an external keyboard, a mouse, and other USB devices, described in [“USB 2.0 Ports”](#) (page 27).
- **FireWire ports:** The computer has one IEEE-1394a FireWire 400 port and one IEEE-1394b FireWire 800 port. For more information, see [“FireWire Ports”](#) (page 28).
- **Hard disk storage:** The computer comes with a built-in 4200 rpm hard disk drive with a capacity of 60 or 80 GB. An 80 GB 5400 rpm hard drive is available as a build to order option. For more information and developer guidelines for alternative hard drives, see [“Hard Disk Drive”](#) (page 35).
- **AirPort Extreme:** A 54 Mbps AirPort Extreme Card is standard in the 1.25 GHz model and is available as a build to order option in the 1 GHz model. See [“AirPort Extreme”](#) (page 33).
- **Bluetooth support:** Fully-integrated Bluetooth support enables short-range wireless connections between desktop and laptop computers and a host of other peripheral devices. For more information, see [“Bluetooth Technology”](#) (page 35).
- **Illuminated keyboard:** Some configurations of the 15-inch PowerBook G4 have a backlit keyboard for optimal usability in all lighting conditions. For more information, see [“Keyboard”](#) (page 41).
- **Ambient light sensor:** The computer configurations that have a backlit keyboard also have an ambient light sensor, which monitors light levels and activates the illuminated backlit keyboard and adjusts the display brightness.

Table 1-1 Feature changes

Feature	Previous model	Current model
Processor	PowerPC G4	PowerPC G4
Enclosure	titanium	aluminum alloy
Processor clock speed	867 MHz or 1 GHz	1 GHz or 1.25 GHz
Graphics IC	ATI Mobility Radeon 9000	ATI Mobility Radeon 9600
System bus speed	133 MHz	167 MHz
Device ports	2 USB 1.1 1 FireWire 400	2 USB 2.0 1 FireWire 400 and 1 FireWire 800
Graphics memory	32 or 64 MB of DDR	64 MB of DDR
Hard disk drive	40 GB or 60 GB	60 or 80 GB
Keyboard	standard	backlit keyboard and ambient light sensors on 1.25 GHz
RAM	133 MHz SDR SDRAM SO-DIMMs with 1 GB expansion capacity	DDR333 SDRAM SO-DIMMs with 2 GB expansion capacity
Wireless	AirPort Card standard on 1 GHz Bluetooth available via external dongle	AirPort Extreme Card standard on 1.25 GHz Fully-integrated Bluetooth
Battery	61 watt-hours battery	46 watt-hours battery
Power adapter	65 W power adapter	65 W power adapter
Removable media	DVD-ROM/CD-RW Combo drive or a DVD-R/CD-RW SuperDrive	DVD-ROM/CD-RW Combo drive or a DVD-R/CD-RW SuperDrive

All Features

Here is a list of the features of the 15-inch PowerBook G4. Each feature is described in a later chapter, as indicated in the list.

- **Processor:** The computer has a PowerPC G4 microprocessor running at a clock speed of 1 GHz or 1.25 GHz. For more information, see [“PowerPC G4 Microprocessor”](#) (page 21).
- **Enclosure:** The 15-inch PowerBook G4 has a lightweight aluminum alloy enclosure.
- **System bus:** The speed of the system bus is 167 MHz in both models.
- **Cache:** Internal to the processor IC is a 512 KB L2 cache. See [“Level 2 Cache”](#) (page 21).
- **RAM:** The computer has two SO-DIMM expansion slots for DDR SDRAM modules. The computer comes with 256 MB of DDR SDRAM installed on the 1 GHz configuration and 512 MB of DDR SDRAM installed on the 1.25 GHz configuration. RAM is expandable up to 2 GB. See [“RAM Expansion Slots”](#) (page 55).

- **ROM:** The computer has 1 MB of boot ROM used by Open Firmware at startup. For information about the ROM, see [“Boot ROM”](#) (page 22). For information about Open Firmware, see [“Open Firmware”](#) (page 62).
- **Hard disk storage:** The computer comes with a built-in hard disk drive with a capacity of 60 or 80 GB. For more information and developer guidelines for alternative hard drives, see [“Hard Disk Drive”](#) (page 35).
- **Display:** The display is a 15.2 inch wide-screen TFT (1280 by 854 pixels) with a resolution of 101.4 dpi. See [“Flat-Panel Display”](#) (page 47).
- **External monitor:** All configurations support an external video monitor, using the DVI-I connector for a digital video display and an S-video connector for a PAL or NTSC video monitor. (A VGA adapter and an S-video-to-composite adapter are included and an ADC adapter is available separately.) See [“External Monitors”](#) (page 47).
- **Graphics IC and memory:** The ATI Mobility Radeon 9600 graphics controller operates on the AGP4x bus with 64 MB of video RAM. For more information, see [“Video Display Subsystem”](#) (page 23).
- **Battery:** The computer has a single battery pack that uses lithium ion cells and provides 46 watt-hours at 12.8 V (nominal).
- **Power adapter:** The computer comes with a 65 W power adapter with grounded plug.
- **DVD-ROM/CD-RW Combo drive:** Some configurations have a built-in DVD-ROM/CD-RW drive. See [“DVD-ROM/CD-RW Combo Drive”](#) (page 39).
- **SuperDrive (DVD-R/CD-RW drive):** Some configurations of the 15-inch PowerBook G4 have a built-in DVD-R/CD-RW SuperDrive. For more information, see [“DVD-R /CD-RW SuperDrive”](#) (page 40).
- **CardBus slot:** The computer has a CardBus slot that accepts one Type I or Type II PC card or a CardBus Card. For more information, see [“PC Card/CardBus Slot”](#) (page 59).
- **USB 2.0 ports:** The computer has two USB 2.0 ports for an external keyboard, a mouse, and other USB devices, described in [“USB 2.0 Ports”](#) (page 27).
- **FireWire ports:** The computer has one IEEE-1394a FireWire 400 port and one IEEE-1394b FireWire 800 port. For more information, see [“FireWire Ports”](#) (page 28).
- **Target disk mode:** The 15-inch PowerBook G4 can act like a FireWire storage device connected to another computer. See [“Target Disk Mode”](#) (page 31).
- **Modem:** The computer has a built-in modem with 56 Kbps data rate and V.92 support. For more information, see [“Internal Modem”](#) (page 33).
- **Ethernet:** The computer has a built in Ethernet port with an RJ-45 connector for 10Base-T, 100Base-T, and 1000Base-T operation. For more information, see [“Ethernet Port”](#) (page 32).
- **AirPort Extreme:** A 54 Mbps AirPort Extreme Card is standard in the 1.25 GHz model and is available as a build to order option in the 1 GHz model. See [“AirPort Extreme”](#) (page 33).
- **Bluetooth support:** Fully-integrated Bluetooth support enables short-range wireless connections between desktop and laptop computers and a host of other peripheral devices. For more information, see [“Bluetooth Technology”](#) (page 35).
- **Sound:** The computer has a built-in microphone, stereo speakers with mid-range enhancing third speaker, an audio input line, and audio output line. See [“Sound System”](#) (page 52).
- **Keyboard:** The keyboard has an embedded numeric keypad and inverted-T arrow keys. Some of the function keys are used to control the display brightness and speaker volume. See [“Keyboard”](#) (page 41).
- **Illuminated keyboard:** Some configurations of the 15-inch PowerBook G4 have a backlit keyboard for optimal visibility in all lighting conditions. For more information, see [“Keyboard”](#) (page 41).

- **Ambient light sensor:** The computer configurations that have a backlit keyboard also have an ambient light sensor which monitors light levels and activates the illuminated backlit keyboard and adjusts the display brightness.
- **Trackpad:** The integrated trackpad includes tap/double-tap and drag features. For more information, see “Trackpad” (page 41).
- **Weight:** The basic configuration weighs 2.5 kg (5.6 pounds).
- **Size:** The 15-inch PowerBook G4 is 348 mm (13.7 inches) wide, 243 mm (9.5 inches) deep, and 28 mm (1.1 inches) thick.

Appearance

Figure 1-1 (page 14) is a front view of the 15-inch PowerBook G4 computer. Figure 1-2 (page 15) provides side views that show the I/O ports.

Figure 1-1 Front view of the computer

Figure 1-2 Side views showing I/O ports

Peripheral Devices

In addition to the devices that are included with the computer, several peripheral devices are available separately:

- The 15-inch PowerBook G4 Rechargeable Battery is available separately as an additional or replacement battery.

- The Apple Portable Power Adapter, which comes with the computer, is also available separately. The adapter can fully recharge a completely depleted battery in three hours or less while the computer is running, shut down, or in sleep mode.

Note: The 15-inch PowerBook G4 is designed to use the 65 W Apple Portable Power Adapter which ships with it. A 45 W Apple portable power adapter works with the 15-inch PowerBook G4, but may provide insufficient power during some activities and power may be drawn temporarily from the battery. Therefore a 45 W power adapter is not recommended.

- The Apple DVI to ADC Adapter, which enables the 15-inch PowerBook G4 to support Apple's ADC displays, is available separately.
- The Apple Keyboard, a full-featured USB keyboard, is available separately.
- The Apple Mouse, an optical USB mouse, is available separately.
- The AirPort Extreme Base Station is available separately.
- The AirPort Extreme Card is also available separately.
- A power cable for use on airliners is also available. The airline power cable should have a sense resistor of 24.3K ohms connected between the power plug's shell and ground. For more information, see "[Power Controller](#)" (page 25).

System Software

The 15-inch PowerBook G4 comes with Mac OS X version 10.2.7 installed and runs Mac OS 9 applications in Classic mode. For the latest information, see the references listed in "[Mac OS X](#)" (page 62).

Here are a few items of interest about the system software on the 15-inch PowerBook G4.

Open Firmware

System software on all current Macintosh models uses a design based on Open Firmware. With this approach, the ROM on the main logic board contains only the Open Firmware code needed to initialize the hardware and load an operating system. The rest of the system code is loaded into RAM from disk or from the network. For more information, see the references listed in "[Open Firmware](#)" (page 62).

Computer Identification

Rather than reading the box flag or the model string and then making assumptions about the computer's features, applications that need to find out the features of the computer should use IORegistry calls to test for the features they require. IORegistry calls are part of the I/O Kit API. For more information, see the references listed at "[I/O Kit](#)" (page 62).

Asset management software that reports the kind of computer it is running on can obtain the value of the model property from the IOService plane of the IORegistry. For the 15-inch PowerBook G4, the value of the model property is `PowerBook5,2`.

Power Management

Apple's power management techniques for the 15-inch PowerBook G4 are described in the following paragraphs.

Operating States

The power management protocols on the 15-inch PowerBook G4 support two power-saving states: idle and sleep.

- **Idle:** The system is idling with the main processor stopped in a halted, low-power state. All clocks are running; the system can return to running code within a few nanoseconds. Cache coherency is maintained in this state.
- **Sleep:** The system is completely shut down, with only the DRAM state preserved for quick recovery. All processors are powered off with their state preserved in DRAM. All clocks in the system are suspended except for the 32.768 kHz timebase crystal on the PMU99 IC.

The computer automatically enters idle state after several seconds of inactivity. If the computer is attached to a network, it is able to respond to service requests and other events directed to the computer while it is in idle state.

While it is connected to an AC power supply, the computer can also respond to network activity when it is in sleep state. The user can enable this feature by selecting Wake-on-LAN in the Energy Saver control panel.

When operating on the battery in sleep state, the computer consumes less than 1 watt of power, meeting the Energy Star power-saving standard. When operating on the power adapter in sleep state, the combined computer and adapter consume 3 to 4 watts of power.

Important: Peripherals such as PCMCIA cards and USB devices that do not conform to the computer's power management protocols prevent the computer from switching to sleep state and so deny the user the benefits of this energy-saving state.

Processor and Bus Slewing

To lower power consumption and heat generation, the 15-inch PowerBook G4 incorporates an automatic power management technique called bus slewing. Bus slewing is designed to run at high processor speed, bus speeds, and voltage when the demand on the processor is high, and to run at low processor speed, bus speeds, and voltage when the demand on the processor is low. Switching between different processor/bus speeds and voltages is achieved by a transition that operates seamlessly to the user and should not impact system or application performance.

The 15-inch PowerBook G4 allows the user to control bus slewing mode. The options for specifying either high, reduced, or automatic processor and bus speeds are located at System Preferences>Energy Saver>Show Details>Options>Processor Performance; then select Automatic, Highest, or Reduced.

Slewing is enabled with the automatic setting. When the 15-inch PowerBook G4 is operating on AC power, the default is highest; when operating on battery power, the default is automatic.

If the 15-inch PowerBook G4 detects a system temperature that is too high, due to high ambient temperatures or other factors, it will automatically force the system to slew regardless of the selected setting.

When the 15-inch PowerBook G4 is in slewing mode, the processor, processor bus, and memory bus dynamically adjust their speeds based on the current needs of the system. In the 1.0 GHz configuration, the processor speed will switch between 1 GHz and 612 MHz. In the 1.25 GHz configuration, the processor speed will switch between 1.25 GHz and 765 MHz. For both configurations, the processor bus and memory bus will switch between 167 MHz and 102 MHz.

Architecture

This chapter describes the architecture of the 15-inch PowerBook G4. It includes information about the major components on the main logic board: the microprocessor, the main IC, and the buses that connect them to each other and to the I/O interfaces.

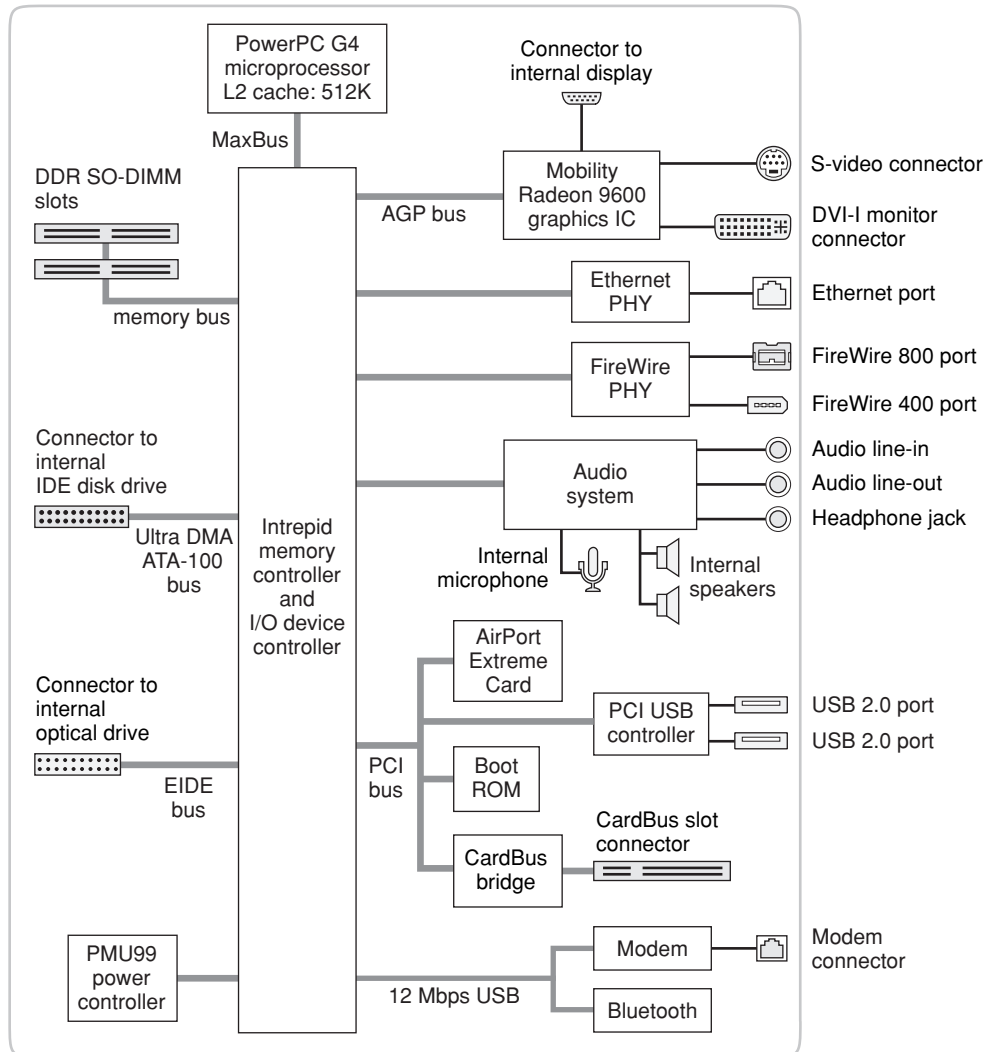

Block Diagram and Buses

This section is an overview of the major ICs and buses on the computer's main logic board.

Block Diagram

[Figure 2-1](#) (page 20) is a simplified block diagram of the main logic board. The diagram shows the input and output connectors, the Intrepid IC, and the major buses.

Figure 2-1 Block diagram

Main IC and Buses

The architecture of the 15-inch PowerBook G4 is designed around the PowerPC G4 microprocessor and the Intrepid IC, which provides the functions of a memory controller and an I/O device controller.

The PowerPC G4 microprocessor is connected to the Intrepid IC by a MaxBus. The bus clock speed is 167 MHz. Additional buses implemented by the Intrepid IC are summarized in Table 2-1, which is in the section [“Intrepid Controller Functions and Buses”](#) (page 21).

The Intrepid IC has a 32-bit PCI bus with a bus clock speed of 33 MHz. The PCI bus also connects to the Boot ROM, the CardBus controller, and the wireless LAN module. The Intrepid IC has other buses that connect with the hard disk drive, the optical drive, the power controller IC, the sound IC, and the internal modem module.

Each of the components listed here is described in one of the following sections.

Microprocessor and Cache

The microprocessor communicates with the rest of the system by way of a 64-bit MaxBus bus to the Intrepid IC. The microprocessor has a separate bus to its internal second-level cache.

PowerPC G4 Microprocessor

The PowerPC G4 microprocessor used in the 15-inch PowerBook G4 has many powerful features, including an efficient pipelined system bus called MaxBus.

Features of the PowerPC G4 include

- 32-bit PowerPC implementation
- superscalar PowerPC core
- Velocity Engine (AltiVec technology): 128-bit-wide vector execution unit
- dual 32 KB instruction and data caches
- an on-chip level 2 (L2) cache consisting of 512 KB with a clock speed ratio of 1:1
- high bandwidth MaxBus (also compatible with 60x bus)
- fully symmetric multiprocessing capability

The PowerPC G4 microprocessor in the 15-inch PowerBook G4 runs at a clock speed of 1 GHz or 1.25 GHz.

Level 2 Cache

The data storage for the L2 cache consists of 512 KB of fast static RAM that is built into the microprocessor chip along with the cache controller and tag storage. The built-in L2 cache runs at the same clock speed as the microprocessor.

Intrepid Controller Functions and Buses

The Intrepid IC provides the functions of a memory controller and an I/O device controller in the 15-inch PowerBook G4.

Note: In the device tree, the I/O controller is named “mac-io”.

In addition to the buses listed in Table 2-1, the Intrepid IC also has separate interfaces to the physical layer (PHY) ICs for Ethernet and FireWire, and an IIC (inter-IC control bus) interface that is used for configuring the memory subsystem.

Table 2-1 Buses supported by the Intrepid IC

Bus	Destinations	Width of data path	Bus clock speed
MaxBus	Microprocessor	64 bits	167 MHz
Memory	System RAM	64 bits	167 MHz
PCI	AirPort Extreme, Boot ROM, and CardBus	32 bits	33 MHz
AGP	Graphics IC	32 bits	133 MHz

The following sections describe the subsystems that are connected to the Intrepid IC.

System RAM

The memory subsystem in the 15-inch PowerBook G4 supports two slots for 200-pin, 333 MHz DDR (PC2700) SO-DIMMs (small-outline dual inline memory modules). The data bus to the RAM and DIMM is 64 bits wide, and the memory interface is synchronized to the MaxBus bus interface at 167 MHz. See [“RAM Expansion Slots”](#) (page 55).

The 15-inch PowerBook G4 supports the bus slewing features of the DDR SDRAM DIMM. For more information, see [“Electrical Design of DDR RAM SO-DIMMs”](#) (page 56).

Boot ROM

The boot ROM is connected to the Intrepid IC by way of the high byte of the PCI bus plus three additional control signals: chip select, write enable, and output enable. The boot ROM is a 1 MB by 8 bit device.

FireWire Controller

The Intrepid IC FireWire controller supports IEEE 1394a FireWire 400 for a maximum data rate of 400 Mbps (50 MBps) and IEEE 1394b FireWire 800 for a maximum data rate of 800 Mbps (100 MBps). The Intrepid IC provides DMA (direct memory access) support for the FireWire interface.

The controller in the Intrepid IC implements the FireWire link layer. A physical layer IC, called a PHY, implements the electrical signaling protocol of the FireWire interface and provides the electrical signals to the port. For more information, see [“FireWire Ports”](#) (page 28).

Ethernet Controller

The Intrepid IC includes an Ethernet media access controller (MAC) that implements the link layer. The Intrepid IC provides DB-DMA support for the Ethernet interface.

The Ethernet controller in the Intrepid IC is connected to a PHY interface IC that provides the electrical signals to the port. The PHY is capable of operating in either 10Base-T, 100Base-T, or 1000Base-T mode. The actual speed of the link is automatically negotiated by the PHY and the hub or switch to which it is connected. For more information, see [“Ethernet Port”](#) (page 32).

The PHY supports Auto-MDIX, which allows the use of straight-through cables in crossover situations (and conversely). For more information, see [“Ethernet Port”](#) (page 32).

Video Display Subsystem

The video display subsystem contains the graphics controller IC with 64 MB of DDR memory. The graphics IC, an ATI Mobility Radeon 9600, contains 2D and 3D acceleration engines, front-end and back-end scalars, a CRT controller, and an AGP4x bus interface with bus master capability.

The features of the Mobility Radeon 9600 include

- graphics processor clock speed of 303 MHz
- memory clock speed of 203 MHz
- support for 64 MB of DDR video memory with 128-bit interface
- 2D and 3D graphics acceleration
- transform acceleration
- lighting acceleration
- video acceleration
- support for MPEG decoding
- support for video mirror mode
- support for dual-display mode
- S-video output for a TV monitor
- support for programmable pixel and vertex shading

The interface between the graphics IC and the rest of the system is an AGP4x bus on the Intrepid IC. To give the graphics IC fast access to system memory, the AGP bus has separate address and data lines and supports deeply pipelined read and write operations. The AGP bus has 32 data lines and a clock speed of 133 MHz.

The graphics IC uses a graphics address remapping table (GART) to translate AGP logical addresses into physical addresses. The graphics driver software can allocate memory in both the graphics SDRAM and the main memory.

The graphics IC supports the built-in flat-panel display and an external monitor. The external monitor can either mirror the built-in display or show additional desktop space (dual-display mode). For information about the displays and supported resolutions, see [“Flat-Panel Display”](#) (page 47) and [“External Monitors”](#) (page 47).

DMA Support

The Intrepid IC provides DB-DMA (descriptor-based direct memory access) support for the following I/O channels:

- Ultra DMA ATA interface to the the internal hard drive
- modem slot interface to the built-in modem
- IIS channel to the sound IC

The DB-DMA system provides a scatter-gather process based on memory resident data structures that describe the data transfers. The DMA engine is enhanced to allow bursting of data files for improved performance.

Interrupt Support

The Intrepid IC has an interrupt controller (MPIC) that handles interrupts generated within the IC as well as external interrupts, such as those from the Ethernet and FireWire controllers.

USB 2.0 Interface

The Intrepid IC implements two independent USB controllers (root hubs), each of which is connected to one of the ports on the side panels of the computer. The use of two independent controllers allows both USB ports to support high data rate devices at the same time with no degradation of their performance. If a user connects a high-speed (480 Mbps) device to one port and another high-speed device to the other, both devices can operate at their full data rates.

The two external USB 2.0 connectors support USB 2.0 and 1.1 devices with data transfer rates of 480 Mbps, 12 Mbps, or 1.5 Mbps. For more information about the connectors, see “[USB Connectors](#)” (page 27).

USB devices connected to the 15-inch PowerBook G4 are required to support USB-suspend mode as defined in the USB specification. Information about the operation of USB-suspend mode on Macintosh computers is included in the *Mac OS USB DDK API Reference*. To obtain it, see the reference at “[USB 2.0 Interface](#)” (page 64).

The USB 2.0 ports on the 15-inch PowerBook G4 comply with the Universal Serial Bus Specification 2.0. The USB controllers comply with the Enhanced Host Controller Interface (EHCI) specification.

Ultra DMA/100 Interface

The Intrepid IC provides an Ultra DMA/100 channel that is connected to the internal hard disk drive. The Intrepid IC provides DB-DMA (descriptor-based direct memory access) support for the Ultra DMA interface.

The internal hard disk drive is connected as device 0 (master) in an ATA Device 0/1 configuration.

EIDE Interface

The Intrepid IC provides an EIDE interface (ATA bus) that supports the Combo drive, SuperDrive. The Combo and SuperDrive drives are ATAPI drives and are device-selected as master in an ATA device configuration.

Modem Support

The internal modem is connected to an internal USB 1.1 port. The Intrepid IC provides DB-DMA support for the modem interface. The modem provides digital call progress signals to the sound circuitry.

The internal modem is a separate module that contains the data pump IC and the interface to the telephone line (DAA). For more information about the modem, see [“Internal Modem”](#) (page 33).

Sound Circuitry

The sound circuitry is connected to the Intrepid IC by a standard IIS (inter-IC sound) bus. The Intrepid IC provides DB-DMA (descriptor-based direct memory access) support for the IIS port.

Note: In the device tree, the sound circuitry is named “sound”.

The sound circuitry includes a signal processing IC that handles the equalization and volume control functions and a codec IC that performs A-to-D and D-to-A conversion.

All audio is handled digitally inside the computer. The sound circuitry performs digital-to-analog conversion for the audio signals to the internal speakers.

For a description of the features of the sound system, see [“Sound System”](#) (page 52).

Power Controller

The 15-inch PowerBook G4 can operate from a 15 volt power outlet on an airline, but for safety reasons, the computer will not allow battery charging. In order for the computer to detect the connection to airline power, the airline power cable should have a sense resistor of 24.3K ohms connected between the power plug's shell and ground.

The 15-inch PowerBook G4 has a variable speed fan control circuit and a thermal circuit that will force the unit to sleep and slow down the processor if the processor temperature exceeds 85 degrees Celsius. The circuit remains active during sleep so that it can continue to poll the temperature.

The power management controller in the 15-inch PowerBook G4 is a custom IC called the PMU99. It supports several power-saving modes of operation, including idle, doze, and sleep. For more information, see [“Power Management”](#) (page 17).

Note: In the device tree, the power controller is named “via-pmu”.

AirPort Extreme Interface

AirPort Extreme contains a media access controller (MAC), a digital signal processor (DSP), and a radio-frequency (RF) section.

Two antennas are built into the computer’s case. To improve reception, a diversity module between the antennas and the card measures the signal strength from both antennas and selects the stronger signal for AirPort Extreme.

AirPort Extreme is based on the IEEE 802.11g standard. The card transmits and receives data at up to 54 Mbps and is compatible with 802.11b-standard 11 Mbps systems and older 802.11b-standard systems. For information about its operation, see [“AirPort Extreme Hardware”](#) (page 34).

CardBus Controller IC

The interface to the PC Card slot is connected to the PCI bus. The CardBus controller IC is a PCI1510A device made by Texas Instruments. It supports both 16-bit PC Cards and 32-bit CardBus Cards.

Devices and Ports

This chapter describes both the built-in I/O devices and the ports for connecting external I/O devices. Each of the following sections describes an I/O port or device.

USB 2.0 Ports

The 15-inch PowerBook G4 has two external USB 2.0 ports that can be used to connect additional I/O devices such as a USB mouse, printers, scanners, and storage devices.

The USB ports on the 15-inch PowerBook G4 comply with the Universal Serial Bus Specification 2.0. For more information about USB on Macintosh computers, consult the references at “[USB 2.0 Interface](#)” (page 64).

Note: Some self-powered USB devices inadvertently violate electrical specifications for self-powered USB devices. For details and ways to avoid this design issue, refer to <http://developer.apple.com/qa/hw/hw82.html>.

USB Connectors

The USB ports use USB Type A connectors, which have four pins each. Two of the pins are used for power and two for data. [Figure 3-1](#) (page 27) is an illustration of a Type A port and matching connector. [Table 3-1](#) shows the pin assignments.

Figure 3-1 USB Type A port

Table 3-1 Pin assignments on the USB port

Pin	Signal name	Description
1	VCC	+5 VDC
2	D-	Data -
3	D+	Data +
4	GND	Ground

The computer provides 5-volt power at 500 mA for each of the two ports.

The external USB 2.0 ports support low-speed (1.5 Mbps), full-speed (12 Mbps), and high-speed (480 Mbps) data transfers. High-speed operation requires the use of shielded cables.

The 15-inch PowerBook G4 comes with version 1.3 of the Macintosh USB system software, which supports all four data transfer types defined in the USB specification.

USB devices can provide a remote wakeup function for the computer. The USB root hub in the computer is set to support remote wakeup whenever a device is attached to the bus.

USB Storage Devices

Class drivers are software components that are able to communicate with many USB devices of a particular kind. If the appropriate class driver is present, any number of compliant devices can be plugged in and start working immediately without the need to install additional software. The Mac OS for the 15-inch PowerBook G4 includes USB Mass Storage Support 2.0, a class driver that supports devices that meet the USB Mass Storage Class specification.

FireWire Ports

The 15-inch PowerBook G4 has one FireWire 400 (IEEE 1394a) port and one FireWire 800 (IEEE 1394b) port. Both FireWire ports

- support booting the system from a mass storage device
- support target disk mode

The two FireWire ports share a single power supply that can provide up to 14 watts total. Both ports are on the same FireWire bus and can connect to up to 62 other FireWire devices.

The FireWire hardware and software provided with the 15-inch PowerBook G4 are capable of all asynchronous and isochronous transfers defined by IEEE standard 1394a and 1394b.

For additional information about the FireWire interface and the Apple API for FireWire device control, refer to the resources listed at [“FireWire Interface”](#) (page 64).

FireWire 400 Connector

The 6-pin FireWire 400 technology

- supports serial I/O at 100, 200, and 400 Mbps
- provides up to 7 watts of power when the computer system is on or when the power adapter is connected and in sleep mode

The FireWire 400 connector has six contacts, as shown in [Figure 3-2](#) (page 29). The connector pin assignments are shown in [Table 3-2](#) (page 29).

Figure 3-2 6-pin FireWire connector**Table 3-2** Pin assignments on the 6-pin FireWire connector

Pin	Signal name	Description
1	Power	Unregulated DC; 12.8 V
2	Ground	Ground return for power and inner cable shield
3	TPB-	Twisted-pair B, differential signals
4	TPB+	Twisted-pair B, differential signals
5	TPA-	Twisted-pair A, differential signals
6	TPA+	Twisted-pair A, differential signals
Shell	—	Outer cable shield

When the computer is on or the power adapter is connected, the power pin provides a maximum voltage of 12.8 V (no load) and 7 W power per port. Maximum output current for both ports combined is 1.5 A and is controlled by a self-resetting fuse.

Pin 2 of the 6-pin FireWire connector is ground for both power and the inner cable shield. If a 4-pin connector is used on the other end of the FireWire cable, its shell should be connected to the wire from pin 2.

The signal pairs are crossed in the cable itself so that pins 5 and 6 at one end of the cable connect with pins 3 and 4 at the other end. When transmitting, pins 3 and 4 carry data and pins 5 and 6 carry clock; when receiving, the reverse is true.

FireWire 800 Connector

The FireWire 800 port on the 15-inch PowerBook G4 is based on IEEE 1394b and enables a 800 Mbps transfer rate. FireWire 800 uses a 9-pin connector and is backwards compatible with original 1394 FireWire devices with 6-pin or 4-pin connectors. With the appropriate cable, the new 9-pin port works seamlessly with legacy FireWire devices. Cables are available to go from both 6-pin and 4-pin connectors to a 9-pin, and 9-pin to 9-pin.

Note: FireWire adapter cables are not included with the computer.

The 9-pin FireWire 800 connector is shown in [Figure 3-3](#) (page 30). Its connector signals and pin assignments are shown in [Table 3-3](#) (page 30).

Figure 3-3 9-pin FireWire 800 connector

Table 3-3 Signals on the 9-pin FireWire 800 connector

Pin	Signal name	Description
1	TPB-	Twisted-pair B Minus
2	TPB+	Twisted-pair B Plus
3	TPA-	Twisted-pair A Minus
4	TPA+	Twisted-pair A Plus
5	TPA (R)	Twisted-pair A Ground Reference
6	VG	Power Ground
7	SC	Status Contact (no connection; reserved)
8	VP	Power Voltage (approximately 12.8 V DC)
9	TPB (R)	Twisted-pair B Ground Reference

VP (pin 8) provides up to 7 W power, shared with the other FireWire connectors. The voltage on the power pin is approximately 12.8 V.

The 9-pin FireWire 800 port is capable of operating at 100, 200, 400, and 800 Mbps, depending on the device to which it is connected. The FireWire 800 port is bilingual in that it supports both IEEE 1394a and 1394b. Using a cable with a 9-pin connector at one end and a 4-pin or 6-pin connector at the other, the 9-pin port is capable of directly connecting to all existing FireWire devices. Using a cable with 9-pin connectors at both ends, the 9-pin port is capable of operating at 800 Mbps.

The IEEE 1394b standard defines long-haul media using Cat 5 UTP and several kinds of optical fiber. The 15-inch PowerBook G4 is interoperable with such cables but cannot be directly connected to them. To use long-haul cables, connect the computer to a 1394b hub that has the desired kind of long-haul connectors. If the hub has a bilingual port, that port can be connected to any of the computer's FireWire ports. If the hub has a beta-only port, it can be connected only to the computer's 9-pin port.

FireWire Device Programming

Mac OS X includes general support for the FireWire bus and specific support for various kinds of FireWire devices and protocols. Developers can use the built-in support or provide additional applications and drivers for use with their products.

The general FireWire services will configure the FireWire bus, scan the bus for new devices, and allow multiple drivers and devices to share a single FireWire interface cooperatively. The general services also publish information about the bus and the devices in the IO Registry, so that IO Kit can match protocols and drivers to each connected FireWire device.

The specific device and protocol support in Mac OS X as provided with the 15-inch PowerBook G4 includes the following:

- General services for Serial Bus Protocol 2 (SBP-2) and support for most mass storage devices using SBP-2, such as hard disk drives, optical drives, flash card readers, Target Disk Mode (see “[Target Disk Mode](#)” (page 31)), and the iPod. Mac OS X can boot from most of these devices.
- General services for the Audio Video Control (AV/C) protocol and support for most digital video (DV) cameras and decks using this protocol, including video capture through standard QuickTime APIs.
- A QuickTime device driver for IIDC/DCAM type cameras such as the iSight.
- A network device driver supporting IP (Internet Protocol) over FireWire according to IEEE RFC 2734.
- Additional services for user-space and kernel access to all FireWire resources.

For information on writing FireWire drivers or applications, download the latest FireWire SDK from <http://developer.apple.com/sdk/>.

For additional references, refer to “[FireWire Interface](#)” (page 64).

Target Disk Mode

One option at boot time is to put the computer into a mode of operation called target disk mode.

When the 15-inch PowerBook G4 is in target disk mode and connected to another Macintosh computer by a FireWire cable, the 15-inch PowerBook G4 operates like a FireWire mass storage device with the SBP-2 (Serial Bus Protocol) standard. Target disk mode has two primary uses:

- high-speed data transfer between computers
- diagnosis and repair of a corrupted internal hard drive

The 15-inch PowerBook G4 can operate in target disk mode as long as the other computer has a FireWire 1394a or 1394b port and is running either Mac OS X (any version) or Mac OS 9 with FireWire software version 2.3.3 or later.

To put the computer into target disk mode, hold down the T key while the computer is starting up. When Open Firmware detects the T key during the boot process, it transfers control to special Open Firmware code.

To take the computer out of target disk mode, press the power button until the computer powers off.

Ethernet Port

The 15-inch PowerBook G4 has a built-in Ethernet port that supports 10Base-T, 100Base-T, and 1000Base-T transfer rates. In operation, the actual speed of the link is auto-negotiated between the computer's PHY device and the network hub or switch to which it is connected.

The connector for the Ethernet port is an RJ-45 connector on the back of the computer. Table 3-4 shows the signals and pin assignments for 10Base-T and 100Base-T operation. Table 3-5 shows the signals and pin assignments for 1000Base-T operation.

Table 3-4 Signals for 10Base-T and 100Base-T operation

Pin	Signal name	Signal definition
1	TXP	Transmit (positive lead)
2	TXN	Transmit (negative lead)
3	RXP	Receive (positive lead)
4	–	Not used
5	–	Not used
6	RXN	Receive (negative lead)
7	–	Not used
8	–	Not used

Table 3-5 Signals for 1000Base-T operation

Pin	Signal name	Signal definition
1	TRD+(0)	Transmit and receive data 0 (positive lead)
2	TRD–(0)	Transmit and receive data 0 (negative lead)
3	TRD+(1)	Transmit and receive data 1 (positive lead)
4	TRD+(2)	Transmit and receive data 2 (positive lead)
5	TRD–(2)	Transmit and receive data 2 (negative lead)
6	TRD–(1)	Transmit and receive data 1 (negative lead)
7	TRD+(3)	Transmit and receive data 3 (positive lead)

Pin	Signal name	Signal definition
8	TRD-(3)	Transmit and receive data 3 (negative lead)

To interconnect two computers for 1000Base-T operation, you must use 4-pair cable (Category 5 or 6).

The Ethernet port on the 15-inch PowerBook G4 supports Auto-MDIX: It switches between MDI (Medium Dependent Interface) and MDI-X operation automatically, so it can be connected to another device by either a straight-through cable or a cross-over cable.

The Ethernet interface in the 15-inch PowerBook G4 conforms to the ISO/IEC 802.3 specification, where applicable, and complies with IEEE specifications 802.3i (10Base-T), 802.3u-1995 (100Base-T), and 802.3ab (1000Base-T).

Internal Modem

The 15-inch PowerBook G4 comes with a built-in modem. The connector for the modem is an RJ-11 connector on the back of the computer.

The modem has the following features:

- modem bit rates up to 56 Kbps (supports K56flex and V.92 modem standards)
- Group 3 fax modem bit rates up to 14.4 Kbps

The modem is connected to an internal USB port and is a vendor-specific USB device. The modem driver controls the modem hardware and presents a virtual serial port to the operating system and applications. Applications that bypass the operating system's modem driver and communicate directly with the SCC will not work properly.

AirPort Extreme

The 15-inch PowerBook G4 computer supports the AirPort Extreme Card, an internal wireless LAN module based on the IEEE 802.11g standard. By communicating wirelessly with a base station, AirPort Extreme can be used for internet access, email access, and file exchange. A base station provides the connection to the Internet or the bridge between the wireless signals and a wired LAN or both. The AirPort Extreme Base Station has connectors for a wired LAN, a DSL or cable modem, or a standard telephone line using the optional 56K modem that is built-in on some models.

AirPort Extreme transmits and receives data at speeds up to 54 Mbps, comparable to wired networking speeds. AirPort Extreme is also compatible with other devices that follow the IEEE 802.11b standard, including PC's. For more information about compatibility, see the reference at ["Wireless Networks"](#) (page 64).

AirPort Extreme Card is standard on the 1.25 GHz configuration and is build to order on the 1 GHz configuration.

Note: As is the case with the existing IEEE 802.11b standard, actual data throughput speeds will be lower than the indicated maximum connection speeds. Inherent in wireless LAN systems, bandwidth overhead is required for wireless routing, scrambling, security error correction, and other processes.

Data Security

AirPort Extreme has several features designed to maintain the security of the user's data.

- In 802.11b mode, the system uses direct-sequence spread-spectrum (DSSS) technology that uses a multi-bit spreading code that effectively scrambles the data for any receiver that lacks the corresponding code.
- The system can use an Access Control List of authentic network client ID values (wireless and MAC addresses) to verify each client's identity before granting access to the network.
- When communicating with a base station, AirPort Extreme uses 64-bit and 128-bit WEP encryption to encode data while it is in transit. Additional security features may be available via firmware upgrades as 802.11 enhancements are ratified by IEEE.
- The AirPort Extreme Base Station can be configured to use NAT (Network Address Translation), protecting data from Internet hackers.
- The AirPort Extreme Base Station can authenticate users by their unique Ethernet IDs, preventing unauthorized computers from logging into your network. Network administrators can take advantage of RADIUS compatibility, used for authenticating users over a remote server. Smaller networks can offer the same security using a local look-up table located within the base station.

As an additional data security measure, VPN can be used in conjunction with the AirPort Extreme data security.

AirPort Extreme Hardware

AirPort Extreme is a fully-integrated, wireless LAN module based on the IEEE 802.11g standard using both OFDM (orthogonal frequency-division multiplexing) and DSSS technologies. Using DSSS, AirPort Extreme is interoperable with PC-compatible wireless LANs that conform to the 802.11b standard at speeds of 11 Mbps, 5.5 Mbps, 2 Mbps, and 1 Mbps. Using OFDM, AirPort Extreme is compatible with all 802.11g standard speeds.

Two antennas are built into the computer, on either side of the flat-panel display. One antenna is always used for transmitting. Either of the two antennas may be used for receiving. Using a diversity technique, AirPort Extreme may select the antenna that gives the best reception. The secondary antenna is used for Bluetooth.

AirPort Extreme Software

The 15-inch PowerBook G4 includes software for setting up and using AirPort Extreme:

- AirPort Extreme Setup Assistant, an easy-to-use program that guides users through the steps necessary to set up AirPort Extreme or set up an AirPort Extreme Base Station.
- Users can switch between wireless networks and can create and join peer-to-peer networks. These functions are accessed via the AirPort Extreme status menu.

- AirPort Extreme Admin Utility, a utility for advanced users and system administrators. With it the user can edit the administrative and advanced settings needed for some advanced configurations.

Bluetooth Technology

Bluetooth is a fully integrated, open specification that enables short-range wireless connections between desktop and laptop computers and a host of other peripheral devices. Bluetooth support is built into Mac OS X and compliant with Bluetooth specification v1.1. It operates on a globally available 2.4 GHz frequency band (ISM band) for worldwide compatibility and has a maximum throughput of 1 Mbps.

The Bluetooth technology supports the following profiles:

- synchronization —enables synchronization of devices over Bluetooth
- serial —provides a wireless serial connection to other Bluetooth devices
- dial-up networking (DUN) — enables a mobile phone to act as a modem
- object push —enables the transfer of files between Bluetooth devices
- human interface device (HID) — enables the use of Bluetooth input devices (keyboards and mice)
- Bluetooth file transfer profile (FTP) — enables browsing of the file system of other Bluetooth devices which support Bluetooth FTP.

For more information on Bluetooth technology, refer to [“Bluetooth”](#) (page 65).

Bluetooth and AirPort Extreme share the antennas in the 15-inch PowerBook G4’s display housing.

Internal, fully-integrated Bluetooth is standard on the 15-inch PowerBook G4.

Hard Disk Drive

The 15-inch PowerBook G4 has an internal hard disk drive with a storage capacity of 60 or 80 GB. The drive has fluid dynamic bearings for quieter operation. The drive uses the Ultra DMA IDE (integrated drive electronics) interface and is ATA-6 compatible. Current Data Transfer Mode for the drive is UDMA mode 5.

The software that supports the internal hard disk is the same as that in previous models with internal IDE drives and includes DMA support.

To obtain the reference documents, see the reference links at [“ATA Devices”](#) (page 63).

Hard Disk Dimensions

[Figure 3-4](#) (page 36) shows the maximum dimensions of the hard disk and the location of the mounting holes. The minimum clearance between any conductive components on the drive and the bottom of the mounting envelope is 0.5 mm.

Figure 3-4 Maximum dimensions of the internal hard disk

Note: Dimensions are in millimeters [inches].

Hard Disk Connector

The internal hard disk has a 48-pin connector that carries both the ATA signals and the power for the drive. The connector has the dimensions of a 50-pin connector, but with one row of pins removed, as shown in [Figure 3-5](#) (page 37). The remaining pins are in two groups: pins 1–44, which carry the signals and power, and pins 45–48, which are reserved. Pin 20 has been removed, and pin 1 is located nearest the gap, rather than at the end of the connector.

Figure 3-5 Hard disk connector and location

Note: Dimensions are in millimeters [inches].

Signal Assignments

Table 3-6 shows the signal assignments on the 44-pin portion of the hard disk connector. A slash (/) at the beginning of a signal name indicates an active-low signal.

Table 3-6 Pin assignments on the ATA hard disk connector

Pin number	Signal name	Pin number	Signal name
1	/RESET	2	GROUND
3	DD7	4	DD8
5	DD6	6	DD9
7	DD5	8	DD10
9	DD4	10	DD11
11	DD3	12	DD12
13	DD2	14	DD13
15	DD1	16	DD14
17	DD0	18	DD15
19	GROUND	20	KEY
21	DMARQ	22	GROUND

Pin number	Signal name	Pin number	Signal name
23	/DIOW, /STOP	24	GROUND
25	/DIOR, /HDMARDY, HSTROBE	26	GROUND
27	IORDY, /DDMARDY, DSTROBE	28	CSEL
29	/DMACK	30	GROUND
31	INTRQ	32	Reserved
33	DA1	34	/PDIAG, /CBLID
35	DA0	36	DA2
37	/CS0	38	/CS1
39	/DASP	40	GROUND
41	+5V LOGIC	42	+5V MOTOR
43	GROUND	44	Reserved

/IOCS16 is not used; see Table 3-7.

ATA Signal Descriptions

Table 3-7 (page 38) describes the signals on the ATA hard disk connector.

Table 3-7 Signals on the ATA hard disk connector

Signal name	Signal description
DA(0–2)	Device address; used by the computer to select one of the registers in the ATA drive. For more information, see the descriptions of the CS0 and CS1 signals.
DD(0–15)	Data bus; buffered from IOD(16–31) of the computer's I/O bus. DD(0–15) are used to transfer 16-bit data to and from the drive buffer. DD(8–15) are used to transfer data to and from the internal registers of the drive, with DD(0–7) driven high when writing.
/CBLID	The host checks this signal after power on or hardware reset to detect whether an 80-conductor cable is present.
/CS0	Register select signal. It is asserted low to select the main task file registers. The task file registers indicate the command, the sector address, and the sector count.
/CS1	Register select signal. It is asserted low to select the additional control and status registers on the ATA drive.
CSEL	Cable select; not available on this computer (n.c.).
/DASP	Device active or slave present; not available on this computer (n.c.).

Signal name	Signal description
/DDMARDY	Drive ready to receive Ultra DMA data.
/DIOR	I/O data read strobe.
/DIOW	I/O data write strobe.
/DMACK	Used by the host to initiate a DMA transfer in response to DMARQ.
DSTROBE	Strobe for Ultra DMA data transfers to host.
/HDMARDY	Ultra DMA data ready.
HSTROBE	Strobe for Ultra DMA data transfers from host.
IORDY	I/O ready; when driven low by the drive, signals the CPU to insert wait states into the I/O read or write cycles.
DMARQ	Asserted by the device when it is ready to transfer data to or from the host.
INTRQ	Interrupt request. This active high signal is used to inform the computer that a data transfer is requested or that a command has terminated.
/PDIAG	Asserted by device 1 to indicate to device 0 that it has completed the power-on diagnostics; not available on this computer (n.c.).
/RESET	Hardware reset to the drive; an active low signal.
/STOP	Stop request; an active low signal.
Key	This pin is the key for the connector.

The built-in ATA devices are connected to the I/O bus through bidirectional bus buffers.

DVD-ROM/CD-RW Combo Drive

Some configurations of the 15-inch PowerBook G4 have a slot-loading DVD-ROM/CD-RW Combo drive. The drive can read DVD media and read and write CD media, as shown in Table 3-8. The DVD-ROM/CD-RW drive also provides DVD-Video playback with DVD MPEG2 decode.

Table 3-8 Types of media read and written by the DVD-ROM/CD-RW drive

Media type	Reading speed	Writing speed
DVD-ROM	8x (CAV)	–
CD-R	24x (CAV)	24x (CLV)
CD-RW	24x (CAV)	10x (CLV)
CD or CD-ROM	24x (CAV)	–

Important: The DVD-ROM/CD-RW drive supports only 12 cm disc media. It does not support 8 cm discs or noncircular media.

Digital audio signals from the DVD-ROM/CD-RW Combo drive can be played through the sound outputs under the control of the Sound Manager in System Preferences.

The DVD-ROM/CD-RW Combo drive is an ATAPI drive and is device-selected as master in an ATA device configuration.

DVD-R /CD-RW SuperDrive

Some configurations of the 15-inch PowerBook G4 have a slot-loading DVD-R/CD-RW SuperDrive drive.

The SuperDrive can read and write DVD media and CD media, as shown in [Table 3-9](#) (page 40). The DVD-R/CD-RW drive also provides DVD-Video playback. (The G4 microprocessor provides the MPEG-2 decoding.)

Table 3-9 Media read and written by the SuperDrive

Media type	Reading speed (maximum)	Writing speed
DVD-R	4x (CAV max)	2x (CLV)
DVD-RW	4x (CAV max)	1x (CLV)
DVD-ROM	8x (CAV max, single layer) 6x (CAV max, dual layer)	–
CD-R	24x (CAV max)	8x (CLV)
CD-RW	12x (CAV max)	4x (CLV)
CD or CD-ROM	24x (CAV max)	–

The Apple SuperDrive writes to DVD-R 4.7 gigabyte General Use media. These discs are playable in most standard DVD players and computer DVD-ROM drives. For a list of players tested by Apple for playability, refer to

<http://www.apple.com/dvd/compatibility/>

For compatibility information regarding recordable DVD formats, refer to

<http://dvddemystified.com/dvdfaq.html#4.3>

Digital audio signals from the SuperDrive can be played through the sound outputs under the control of the Sound Manager in System Preferences.

The SuperDrive is an ATAPI drive.

Trackpad

The pointing device in the 15-inch PowerBook G4 is a trackpad. The trackpad is a solid-state device that emulates a mouse by sensing the motions of the user's finger over its surface and translating those motions into ADB commands.

The user makes selections either by pressing the trackpad button (below the trackpad) or by tapping and double tapping on the pad itself. The trackpad responds to one or two taps on the pad itself as one or two clicks of the button. The user can tap and drag on the trackpad in much the same manner as clicking and dragging with the mouse. The tap and double-tap functions are optional; the user activates or deactivates them by means of the keyboard and mouse pane in System Preferences.

The trackpad on the 15-inch PowerBook G4 has palm-rejection capabilities that help prevent unintended trackpad input while typing is being performed. When the "Ignore trackpad while typing" checkbox is selected on the mouse pane of Systems Preferences, the system software attempts to filter out unintended contact with the trackpad. The trackpad will not respond when a mouse is present and the "Ignore trackpad when mouse is present" checkbox is selected on the keyboard mouse pane of Systems Preferences.

Note: If the trackpad is not responding to intended input, check to see if the "Ignore trackpad while typing" checkbox is selected.

Keyboard

The keyboard is a full-size, 19 mm pitch, low-profile design with a row of function keys and inverted-T cursor motion keys. A dedicated media eject key is located to the right of the F12 function key.

Some configurations of the 15-inch PowerBook G4 have a backlit keyboard and ambient light sensors that control the brightness of the display and the keyboard backlighting. In low light, the computer automatically illuminates the backlit keyboard and lowers the display brightness. As light levels increase, the display brightness is re-adjusted automatically and the keyboard backlighting is turned off. There are two light sensors, one under each speaker grill.

Access to internal components and expansion connectors is no longer via the keyboard, so the keyboard is not latched for removal. Access to the memory cards is via the RAM expansion slot and is explained in "[RAM Expansion Slots](#)" (page 55).

Changing the Operation of the Keyboard

Several of the keys on the keyboard have more than one mode of operation.

- Function keys F1–F10 can also control features such the display brightness, the speaker volume, the dual display feature, the Num Lock function, and the illuminated keyboard brightness. Refer to [Table 3-10](#) (page 45) for the entire list. A media eject key is located to the right of the F12 function key.
- Certain control keys can be used as page-control keys.
- The keys on the right side of the keyboard can be used as a numeric keypad.

The next sections describe these groups of keys and the way their alternate modes of operation are selected by using the Fn key, and the Num Lock key.

Keyboard Illustrations

[Figure 3-6](#) (page 42) shows the actual appearance of the keyboard. In some configurations, keys F8, F9, and F10 are used for backlight illumination and are available when the ambient light is low enough to enable the feature. [Figure 3-7](#) (page 43) shows the alternate modes of operation of the function and control keys. [Figure 3-8](#) (page 44) shows the embedded numeric keypad.

Figure 3-6 Keyboard layout

[Figure 3-7](#) (page 43) and [Figure 3-8](#) (page 44) include duplicate versions of some keys in order to show their alternate modes of operation. In some cases, the alternate key captions shown in the figures do not appear on the keyboard. For the actual appearance of the keyboard, refer to [Figure 3-6](#) (page 42).

Figure 3-7 Alternate operations of function and control keys

Figure 3-8 Embedded numeric keypad operation

Using the Fn Key

Pressing the Fn key affects three sets of keys: the function keys F1–F12, the embedded numeric keypad, and certain modifier keys.

- It toggles the function keys between their control-button operation and their F1–F10 functions, as shown in [Table 3-10](#) (page 45) and [Figure 3-7](#) (page 43).
- It selects the embedded numeric keypad on the right portion of the alphanumeric keys, as shown in [Table 3-11](#) (page 46) and [Figure 3-8](#) (page 44).

- It changes certain control keys, including the cursor control keys, to page control keys, as shown in [Table 3-12](#) (page 46) and [Figure 3-8](#) (page 44).

Note: In Mac OS X, a third-party utility is needed to implement user-programmable function key assignments.

Using the Num Lock Key

Pressing the Num Lock key affects two sets of keys: the embedded keypad and the rest of the alphanumeric keys.

- It selects the embedded numeric keypad, as shown in [Table 3-11](#) (page 46) and [Figure 3-8](#) (page 44).
- It makes the rest of the alphanumeric keys functionless (NOPs), as shown in [Figure 3-8](#) (page 44).

The Function Keys

[Table 3-10](#) (page 45) defines the operation of the function keys.

Table 3-10 The function keys as control buttons

Key name	Control button
F1	Decrease display brightness
F2	Increase display brightness
F3	Mute the speaker
F4	Decrease speaker volume
F5	Increase speaker volume
F6	Num Lock
F7	Switch between dual display and mirroring modes
F8	Keyboard illumination control
F9	Decrease keyboard illumination
F10	Increase keyboard illumination

The Embedded Keypad

A certain group of alphanumeric keys can also function as an embedded keypad. The user selects this mode by using the Fn key or the Num Lock key. [Figure 3-8](#) (page 44) shows the keys making up the embedded keypad and [Table 3-11](#) (page 46) lists them.

Table 3-11 Embedded keypad keys

Key name	Keypad function		Key name	Keypad function
6	Clear		P	* (multiply)
7	7		J	1
8	8		K	2
9	9		L	3
0	/ (divide)		;	- (subtract)
-	= (equals)		M	0
U	4		,	NOP
I	5		.	. (decimal)
O	6		/	+ (add)

When the embedded keypad is made active by the Num Lock key, the other alphanumeric keys have no operation (NOP), as shown in [Figure 3-8](#) (page 44). The affected keys include certain special character keys: plus and equal sign, right and left brackets, vertical bar and backslash, and straight apostrophe.

Other Control Keys

The cursor control keys can also be used as page control keys. Other control keys can take on the functions of certain keys on a PC keyboard, for use with PC emulation software. The Fn key controls the modes of operation of this group of keys. [Table 3-12](#) (page 46) is a list of these keys and their alternate functions. These control keys are also show in [Figure 3-8](#) (page 44).

Table 3-12 Control keys that change

Key name	Alternate function
Shift	Right shift key
Control	Right control key
Option	Alt gr (right Alt key)
Command	Windows key
Enter	Menu key (for contextual menus)
Left arrow	Home
Up arrow	Page up
Down arrow	Page down
Right arrow	End

Flat-Panel Display

The 15-inch PowerBook G4 has a built-in color flat-panel display. It is a wide-screen display (1280 by 854 pixels) and is 15.2 inches across, measured diagonally. The resolution is 101.4 dpi.

The display is backlit by a cold cathode fluorescent lamp (CCFL). The display uses TFT (thin-film transistor) technology for high contrast and fast response.

In addition to its native resolution (1280 by 854) the display also supports several non-native resolutions, as shown in Table 3-13. The graphics controller IC includes a scaling function that expands displays with those smaller resolutions to fill the screen.

The display's native resolution, 1280 by 854, has an aspect ratio of 3:2. When selecting a picture resolution with an aspect ratio of 4:3, the user can choose to have it displayed with square pixels and black margins on the sides, or with stretched pixels that fill the display from side to side. These options are shown in Table 3-13.

Table 3-13 Picture sizes on the flat-panel display

Picture size	Display area used	Black margins	Shape of pixels
640 by 480	1024 by 768	yes	square
640 by 480	1280 by 854	no	stretched
720 by 480	1280 by 854	no	square
800 by 600	1024 by 768	yes	square
800 by 600	1280 by 854	no	stretched
896 by 600	1280 by 854	no	square
1024 by 768	1024 by 768	yes	square
1024 by 768	1280 by 854	no	stretched
1152 by 768	1280 by 854	no	square

External Monitors

The 15-inch PowerBook G4 has a Digital Visual Interface (DVI) connector for flat panel displays, an external video monitor, or a projection device. The DVI connector supports all DVI-equipped displays. A DVI-to-VGA adapter for use with analog monitors is included. With a ADC-to-DVI adapter, available separately, the 15-inch PowerBook G4 can be used with any Apple flat panel display.

The computer also has an S-video connector that supplies a video signal for an NTSC or PAL video monitor or VCR. See [“External Video Port”](#) (page 50).

Dual Display and Mirror Mode

An external monitor or projection device connected to the computer can increase the amount of visible desktop space. This way of using an external monitor is called dual display to distinguish it from mirror mode, which shows the same information on both the external display and the built-in display.

The scaling function is available when the internal display and an external monitor are both operating and the mirror mode is selected. However, the external monitor could have black borders during mirroring, depending on the supported timings between the two displays and on the monitor's selection algorithm. Both displays show full-sized images only when the display resolution for the external monitor is set to the internal display's native resolution: 1280 by 854. Both displays can operate with other resolution settings, but in mirror mode, one of them has a display that is smaller than the full screen and has a black border around it. With the resolution for the external monitor set to 640 by 480 or 800 by 600, the image on the internal display is smaller than its screen. For resolution settings larger than 1280 by 854, the image on the external monitor is smaller than its screen.

Analog Monitor Resolutions

The 15-inch PowerBook G4 comes with an adapter for use with an analog video monitor. [Table 3-14](#) (page 48) lists the picture sizes and frame rates supported.

Table 3-14 Picture sizes on an analog monitor

Picture size (pixels)	Frame rate	Pixel depth		Picture size (pixels)	Frame rate	Pixel depth
512 by 384	60 Hz	24 bpp		1024 by 768	72 Hz	24 bpp
640 by 480	60 Hz	24 bpp		1024 by 768	75 Hz	24 bpp
640 by 480	67 Hz	24 bpp		1024 by 768	85 Hz	24 bpp
640 by 480	72 Hz	24 bpp		1152 by 870	75 Hz	24 bpp
640 by 480	75 Hz	24 bpp		1280 by 960	75 Hz	24 bpp
640 by 480	85 Hz	24 bpp		1280 by 1024	60 Hz	24 bpp
640 by 870	75 Hz	24 bpp		1280 by 1024	75 Hz	24 bpp
800 by 600	56 Hz	24 bpp		1600 by 1200	60 Hz	24 bpp
800 by 600	60 Hz	24 bpp		1600 by 1200	65 Hz	24 bpp
800 by 600	72 Hz	24 bpp		1600 by 1200	70 Hz	24 bpp
800 by 600	75 Hz	24 bpp		1600 by 1200	75 Hz	24 bpp
800 by 600	85 Hz	24 bpp		1792 by 1344	60 Hz	24 bpp
832 by 624	75 Hz	24 bpp		1856 by 1392	60 Hz	24 bpp
1024 by 768	60 Hz	24 bpp		1920 by 1440	75 Hz	24 bpp

Picture size (pixels)	Frame rate	Pixel depth		Picture size (pixels)	Frame rate	Pixel depth
1024 by 768	70 Hz	24 bpp		2048 by 1536	75 Hz	24 bpp

When the flat-panel display and an external video monitor are operating at the same time, the system allocates 16 MB of video memory for each, enough to support the full 24-bit pixel depth at resolutions up to 2048 by 1536 pixels.

Digital Display Resolutions

[Table 3-15](#) (page 49) shows the resolutions supported on flat-panel (digital) displays. The 32 MB of video RAM on the accelerated graphics card supports pixel depths up to 32 bits per pixel at all resolutions.

Table 3-15 Picture sizes on a digital display

640 by 480	1024 by 768
800 by 500	1280 by 800
800 by 512	1280 by 1024
800 by 600	1344 by 840
960 by 600	1600 by 1024
1024 by 600	1600 by 1200
1024 by 640	1920 by 1200

DVI-I Connector

The external monitor connector is a DVI-I connector. It carries both digital and analog video signals. [Figure 3-9](#) (page 49) shows the contact configuration; [Table 3-16](#) (page 49) and [Table 3-17](#) (page 50) list the signals and pin assignments.

Figure 3-9 DVI-I connector

Table 3-16 Main signals on the DVI-I connector

Pin	Signal name	Pin	Signal name
1	TMDS Data2-	13	TMDS Data3+

Pin	Signal name		Pin	Signal name
2	TMDS Data2+		14	+5V Power
3	TMDS Data2/4 Shield		15	Ground for +5V Power
4	TMDS Data4–		16	Hot Plug Detect
5	TMDS Data4+		17	TMDS Data0–
6	DDC Clock		18	TMDS Data0+
7	DDC Data		19	TMDS Data0/5 Shield
8	Analog Vertical Sync		20	TMDS Data5–
9	TMDS Data1–		21	TMDS Data5+
10	TMDS Data1+		22	TMDS Clock Shield
11	TMDS Data1/3 Shield		23	TMDS Clock+
12	TMDS Data3–		24	TMDS Clock–

Table 3-17 MicroCross signals on the DVI-I connector

Pin	Signal name
C1	Analog Red Video
C2	Analog Green Video
C3	Analog Blue Video
C4	Analog Horizontal Sync
C5	Analog Common Ground Return

The graphics data sent to the digital monitor use transition minimized differential signaling (TMDS). TMDS uses an encoding algorithm to convert bytes of graphics data into characters that are transition-minimized to reduce EMI with copper cables, and DC-balanced for transmission over fiber optic cables. The TMDS algorithm also provides robust clock recovery for greater skew tolerance with longer cables or low-cost short cables. For additional information about TMDS, see the references shown in [“Digital Visual Interface”](#) (page 64).

External Video Port

The 15-inch PowerBook G4 has a video port that provides S-video output to a PAL or NTSC video monitor or VCR. The video output connector is a 7-pin S-video connector. [Figure 3-10](#) (page 51) shows the arrangement of the pins and [Table 3-18](#) shows the pin assignments on the S-video connector.

Figure 3-10 S-video connector**Table 3-18** Pin assignments for the S-video output connector

Pin number	S-video output connector
1	Analog GND
2	Analog GND
3	Video Y (luminance)
4	Video C (chroma)
5	composite video
6	Unused
7	Unused

An adapter (included) can be plugged into the S-video connector and accepts an RCA plug for connecting a composite video monitor.

The 15-inch PowerBook G4 provides video output at picture sizes and frame rates compatible with the NTSC and PAL standards; the picture sizes are listed in Table 3-19. Those picture sizes produce underscanned displays on standard monitors.

Table 3-19 Picture sizes for S-video output

Picture size	Pixel depth
512 by 384	24 bpp
640 by 480	24 bpp
720 by 480 (NTSC only)	24 bpp
720 by 576 (PAL only)	24 bpp
800 by 600	24 bpp
832 by 624	24 bpp
1024 by 768	24 bpp

Sound System

The 24-bit stereo audio circuitry provides sound input through the built-in microphone, the audio line in, the USB port, and sound output through built-in stereo speakers and the midrange-enhancer speaker and the audio minijack.

All audio is handled digitally inside the computer, including audio data from the optical drive and devices connected to the USB and FireWire ports. Sound data is converted to analog form only for output to the internal speakers and the audio line out.

The sound circuitry handles audio data as 44.1 kHz 24-bit samples. If audio data sampled at a lower rate on another computer is played as output, the Sound Manager transparently upsamples the data to 44.1 kHz prior to sending the audio data to the sound circuitry.

The 15-inch PowerBook G4 can record sound data from the built-in microphone, an audio CD, the audio input jack, or a USB audio device. For each sound input source, sound play-through can be enabled or disabled. Sound data from digital sources is converted to analog form for output to the speakers and the sound output jack.

Sound Inputs

The sound system accepts inputs from the following sources:

- the built-in microphone
- the audio input jack
- a CD or DVD in the DVD-ROM/CD-RW Combo drive
- a CD or DVD in the DVD-R/CD-RW SuperDrive
- a digital audio device connected to a USB or FireWire port
- sound signals from the communication (modem) slot

The microphone preamp has a dedicated analog input channel in the sound circuitry; the other inputs send digital data. The analog input can be set for play-through or recording. The digital inputs can be selected or mixed by the sound circuitry.

The computer also accepts digital sound data from the DVD-ROM/CD-RW Combo drive, DVD-R /CD-RW SuperDrive, or from devices connected to the USB or FireWire ports. Sound data from those sources can be sent to the sound system to be converted to analog form for output to the speakers and the output jack.

Built-in Microphone

The built-in microphone is located in the middle of the left speaker grille. The sound signal from the built-in microphone goes through a dedicated preamplifier.

Audio Input

The audio input jack is a 3.5 mm mini phone jack located on the I/O panel on the side of the computer. The audio input jack accepts line-level stereo signals. It also accepts a stereo miniplug-to-RCA cable adapter for connecting stereo equipment to the computer.

The audio input jack signal connections are

- tip: audio left channel
- ring: audio right channel
- sleeve: audio ground

The audio input has the following electrical characteristics:

- maximum input signal amplitude 2 V_{rms} (5.65 V_{pp}), +8 dbu peak
- input impedance 30 kilohms
- channel separation greater than 60 dB
- recommended source impedance 2 kilohms or less
- ground noise rejection greater than 40 dB
- frequency response 5 Hz to 20 kHz, +0.0, -0.5 dB
- distortion below -80 dB
- signal to noise ratio (SNR) greater than 90 dB A-weighted

Sound Output

The sound system sends sound output signals to the built-in speakers and the external sound output jacks.

Audio Output/Headphone Jack

The audio line out and headphone jack are located on the left side of the computer. The jacks accept a standard stereo mini-plug.

The stereo audio signals at the jacks are configured to drive a pair of low-impedance stereo headphones. External powered speakers may also be connected to the audio line out.

The audio signals on the audio line out and headphone jack have the following electrical characteristics:

- output impedance: 16 ohms each channel
- minimum recommended load impedance: 32 ohms each channel
- maximum level: 1.5 V rms (4.4 V P-P)
- signal to noise ratio (SNR) greater than 100 dB A-weighted
- total harmonic distortion (THD) 0.03% or less

Internal Speakers

The computer has three internal speakers: one on either side of the keyboard and one beneath the keyboard for mid-range enhancement. The computer turns off the sound signals to the speakers when an external device is actively connected to the sound output jack and during power cycling.

Digitizing Sound

If a sound sampled at a low rate on another computer is played as output, the Sound Manager transparently upsamples the sound to 44.1 kHz prior to outputting the audio to the sound circuitry.

When recording sound from a microphone, applications that may be affected by feedback should disable sound play-through by calling the Sound Manager functions.

Expansion Features

This chapter describes the expansion features of the 15-inch PowerBook G4: the RAM expansion slots and the CardBus slot.

RAM Expansion Slots

The 15-inch PowerBook G4 has two RAM expansion slots that accommodate standard SO (small outline) DIMMs using DDR SDRAM devices. One or both slots may be occupied by factory-installed DDR SO-DIMMs. The slots are accessible for user installation of an additional or larger DDR SO-DIMM.

RAM expansion SO-DIMMs must be DDR333 PC2700 compliant.

The SO-DIMMs must use DDR SDRAM devices. If the user installs an SO-DIMM that uses SDR devices, the boot process will fail when the user attempts to restart the computer and the computer will not operate.

The address logic for the RAM slots supports up to 2 GB total DDR RAM. Using the highest-density devices currently available, an SO-DIMM can contain up to 1 GB of RAM, so the two RAM expansion slots can accommodate up to 2 GB total RAM.

Accessing the RAM Slots

The user can access the RAM expansion slots by removing the memory slot cover on the back of the computer, as shown in [Figure 4-1](#) (page 56). For complete instructions on accessing and replacing the RAM memory, refer to the *15-inch PowerBook G4 Getting Started* guide that came with the computer.

Figure 4-1 Interior view showing RAM expansion slots

Mechanical Design of DDR RAM SO-DIMMs

The RAM expansion modules used in the 15-inch PowerBook G4 are standard 200-pin PC2700 DDR333 RAM SO-DIMMs, as defined in the JEDEC specifications.

The mechanical characteristics of the RAM expansion DDR SO-DIMM are given in the JEDEC specification number JESD95. To obtain a copy of the specification, see the references listed at [“RAM Expansion Modules”](#) (page 63).

The specification defines DDR SO-DIMMs with nominal heights of 1.0, 1.25, 1.5, and 2.0 inches. The 15-inch PowerBook G4 can accommodate DDR SO-DIMMs with heights of 1.25 inches or less.

Important: The 15-inch PowerBook G4 can not accept a 1.5 or 2-inch SO-DIMM.

The JEDEC specification defines the maximum depth or thickness of an SO-DIMM as 3.8 mm. Modules that exceed the specified thickness can cause reliability problems.

Electrical Design of DDR RAM SO-DIMMs

DDR SO-DIMMs for the 15-inch PowerBook G4 are required to be PC2700 compliant. For information about the PC2700 specifications, see the references at [“RAM Expansion Modules”](#) (page 63).

The electrical characteristics of the DDR RAM SO-DIMM are given in section 4.5.6 of the JEDEC Standard 21-C, release 7 (JESD-21C). To obtain a copy of the specification, see the references listed at [“RAM Expansion Modules”](#) (page 63).

The JEDEC and Intel specifications define several attributes of the DIMM, including storage capacity and configuration, connector pin assignments, and electrical loading. The specifications support SO-DIMMs with either one or two banks of memory.

Important: The memory controller on the 15-inch PowerBook G4 uses a separate CKE signals for each bank, as called out in the JEDEC specification. SO-DIMMs that have all the CKE pins connected together do not operate properly.

The JEDEC specification for the SO-DIMM defines a Serial Presence Detect (SPD) feature that contains the attributes of the module. SO-DIMMs for use in PowerBook computers are required to have the SPD feature. Information about the required values to be stored in the presence detect EEPROM is in section 4.1.2.5 and Figure 4.5.6–C (200-Pin DDR SDRAM SO–DIMM, PD INFORMATION) of the JEDEC standard 21-C specification, release 7.

Important: For a DIMM to be recognized by the startup software, the SPD feature must be programmed properly to indicate the timing modes supported by the DIMM.

Capacitance of the data lines must be kept to a minimum. Individual DRAM devices should have a pin capacitance of not more than 5 pF on each data pin.

DDR SDRAM Devices

The DDR SDRAM devices used in the RAM expansion modules must be self-refresh type devices for operation from a 2.5 V power supply. The speed of the SDRAM devices must be 167 MHz or higher.

The devices are programmed to operate with a CAS latency of 2.5. At this CAS latency the access time from the clock transition must be +/- 0.6 ns or less for data strobes and +/- 0.7 ns for data lines. The burst length must be at least 4 and the minimum clock delay for back-to-back random column access cycles must be a latency of 1 clock cycle.

When the computer is in sleep mode, the RAM modules are in self-refresh mode and the maximum power-supply current available for each RAM module is 6 mA/128 MB (see the section “[DDR RAM SO-DIMM Electrical Limits](#)” (page 58)). Developers should specify SDRAM devices with low power specifications so as to stay within that limit.

Configuration of DDR RAM SO-DIMMs

Table 4-1 shows information about the different sizes of DDR SDRAM devices used in the memory modules. The first two columns show the memory size and configuration of the DDR SO-DIMMs. The next two columns show the number and configuration of the DDR SDRAM devices making up the memory modules.

Table 4-1 Sizes of RAM expansion modules and devices

SO-DIMM size	SO-DIMM configuration (MB x bits)	Number of devices	Device configuration (MB x bits)	Number of banks
128 MB	16 x 64	8	16 x 8	1
128 MB	16 x 64	8	8 x 16	2

SO-DIMM size	SO-DIMM configuration (MB x bits)	Number of devices	Device configuration (MB x bits)	Number of banks
256 MB	32 x 64	16	16 x 8	2
256 MB	32 x 64	8	32 x 8	1
256 MB	32 x 64	8	16 x 16	2
512 MB	64 x 64	8	64 x 8	2
512 MB	64 x 64	16	32 x 8	2
1 GB	128 x 64	16	32 x 16	2

Note: The 15-inch PowerBook G4 does not use memory interleaving, so installing two SO-DIMMs of the same size does not result in any performance gain.

Address Multiplexing

Signals A[0] – A[12] and BA[0] – BA[1] on each DDR RAM SO-DIMM make up a 15-bit multiplexed address bus that can support several different types of DDR SDRAM devices. Table 4-2 lists the types of devices that can be used in the 15-inch PowerBook G4 by size, configuration, and sizes of row, column, and bank addresses.

Important: The 15-inch PowerBook G4 supports only the types of DDR SDRAM devices specified in Table 4-2. Other types of devices should not be used with this computer.

Table 4-2 Types of DDR DRAM devices

Device size	Device configuration (bytes x bits x banks)	Row address bits	Column address bits
128 Mbits	4 M x 8 x 4	12	10
128 Mbits	2 M x 16 x 4	12	9
128 Mbits	1 M x 32 x 4	12	8
256 Mbits	8 M x 8 x 4	13	10
256 Mbits	4 M x 16 x 4	13	9
512 Mbits	16 M x 8x 4	13	11

DDR RAM SO-DIMM Electrical Limits

Each DDR RAM SO-DIMM must not exceed the following maximum current limits on the +2.5 V supply:

Active: 1.2 A (8 devices at 150 mA each)

Sleep: 6 mA/128 MB

Important: The restriction on sleep current is required not only to maximize the battery life but to meet the limitations of the backup battery during sleep swapping of the main battery. Developers of RAM expansion modules that exceed the limit on sleep current must include a warning to the user that battery sleep swapping may not work with those modules installed.

The Intrepid memory controller does not support 4-bit-wide SDRAM devices in any RAM expansion module.

PC Card/CardBus Slot

The PC Card/CardBus slot accepts one Type I or Type II card. The slot supports both 16-bit PC Cards and 32-bit CardBus Cards. The card can be removed and replaced while the computer is operating.

Note: The CardBus slot does not provide 12 V power.

Supplemental Reference Documents

For more information about the technologies mentioned in this developer note, you may wish to consult some of the following references.

For information about older models of Macintosh computers, refer to the developer notes archive at

<http://developer.apple.com/documentation/Hardware/hardware2.html>

Apple Technical Notes

Apple Technical Notes answer many specific questions about the operation of Macintosh computers and the Mac OS. The notes are available on the Technical Note website at

<http://developer.apple.com/technotes/>

3D Graphics

Developers of 3D graphics for games should know about OpenGL for Macintosh[®], a new version of SGI's application programming interface (API) and software library for 3D graphics.

Information is available on the World Wide Web at

<http://www.apple.com/macosx/technologies/graphics.html>

Developer support and documentation is available at

<http://developer.apple.com/opengl/>

PowerPC G4 Microprocessor

Information about the PowerPC G4 microprocessor is available on the World Wide Web at

http://e-www.motorola.com/webapp/sps/site/prod_summary.jsp?code=MPC7457&nodeId=018rH3bTdG8653

Velocity Engine

Velocity Engine is Apple's name for the AltiVec vector processor in the PowerPC G4 microprocessor. Apple provides support for developers who are starting to use the Velocity Engine in their applications. Documentation, development tools, and sample code are available on the World Wide Web, at

<http://developer.apple.com/hardware/drivers/ve/index.html>

AltiVec Technology Programming Environments Manual (AltiVec PEM) is a reference guide for programmers. It contains a description for each instruction and information to help in understanding how the instruction works. You can obtain a copy of the AltiVec PEM through the Motorola AltiVec site on the World Wide Web, at

<http://www.freescale.com/webapp/sps/site/overview.jsp?nodeId=02VS0I81285Nf2>

Mac OS X

Mac OS X version 10.2.7 is installed by default on the 15-inch PowerBook G4. For access to Apple's developer documentation for Mac OS X, see the Apple Developer Connection (ADC) website at

<http://developer.apple.com/documentation/MacOSX/MacOSX.html>

O'Reilly & Associates publishes a series of books about Mac OS X development. The books in this series have been technically reviewed by Apple engineers and are recommended by the Apple Developer Connection.

I/O Kit

The I/O Kit is part of Darwin, the operating system foundation for Mac OS X. The documentation for I/O Kit is available on Apple's Darwin website at

<http://developer.apple.com/documentation/Darwin/Darwin.html>

Open Firmware

The software architecture implemented on current Macintosh computers follows the standard defined by the Open Firmware IEEE 1274-1994 specification. Three Technical Notes provide an introduction to Open Firmware on the Macintosh platform. They are:

TN1061: Open Firmware, Part I, available at

<http://developer.apple.com/technotes/tn/tn1061.html>

TN1062: Open Firmware, Part II, available at

<http://developer.apple.com/technotes/tn/tn1062.html>

TN1044: Open Firmware, Part III, available at

<http://developer.apple.com/technotes/tn/tn1044.html>

Other Technical Notes provide additional information about Open Firmware on the Macintosh.

TN2000: PCI Expansion ROMs and You, at

<http://developer.apple.com/technotes/tn/tn2000.html>

TN2001: Running Files from a Hard Drive in Open Firmware, at

<http://developer.apple.com/technotes/tn/tn2001.html>

TN2004: Debugging Open Firmware Using Telnet, available at

<http://developer.apple.com/technotes/tn/tn2004.html>

RAM Expansion Modules

The mechanical characteristics of the DDR RAM SO-DIMM are given in JEDEC specification number JESD95. The specification can be found by using the search string JESD95 on the Electronics Industry Association's website at

<http://www.jedec.org/DOWNLOAD/default.cfm>

The electrical characteristics of the DDR RAM SO-DIMM are given in JEDEC Standard 21-C. The specification can be found by using the search string JESD21-C on the Electronics Industry Association's website at

<http://www.jedec.org/DOWNLOAD/default.cfm>

The DDR RAM DIMMs are required to be PC2700 compliant. Information about the PC2700 specifications is available from Intel's website at

<http://developer.intel.com/technology/memory/>

ATA Devices

ATA (AT Attachment), also referred to as integrated drive electronics (IDE), is a standard interface used with storage devices such as hard disk drives. For more information on ATA, refer to the following Apple website at

<http://developer.apple.com/documentation/Hardware/DeviceManagers/ata/ata.html>

Information about the ATA standards is available at the Technical Committee T13 AT Attachment website, at

<http://www.t13.org/>

USB 2.0 Interface

For more information about USB 2.0 on Macintosh computers, refer to Apple Computer's *Mac OS USB DDK API Reference*. Information is also available on the World Wide Web, at

<http://developer.apple.com/documentation/Hardware/DeviceManagers/usb/usb.html>

USB game controllers are supported by the InputSprocket component of the Apple Games Sprockets software architecture. InputSprocket software and information about the InputSprocket API can be found at

<http://developer.apple.com/games/>

For full specifications of the Universal Serial Bus, you should refer to the USB Implementation Forum on the World Wide Web, at

<http://www.usb.org/developers/docs>

FireWire Interface

For additional information about the FireWire IEEE 1394a and 1394b interfaces and the Apple API for FireWire software, refer to the resources available on the Apple FireWire website at

<http://developer.apple.com/firewire/index.html>

The IEEE 1394 standards are available from the IEEE. Ordering information can be found on the World Wide Web at

<http://shop.ieee.org/store>

You may also find useful information at the 1394 Trade Association's website:

<http://www.1394ta.org/>

Digital Visual Interface

For information about transition minimized differential signaling (TMDS) used with digital video monitors, see the specification, Digital Visual Interface DVI Revision 1.0, available on the website of the Digital Display Working Group (DDWG) at

Wireless Networks

More information about Wi-Fi and wireless networks using the IEEE 802.11 standard is available on the website of the Wireless Ethernet Compatibility Alliance, at

<http://www.wirelessethernet.org/OpenSection/>

Bluetooth

For more information regarding Bluetooth technology, refer to the following locations on the World Wide Web.

Bluetooth specification:

<http://www.bluetooth.com/>

Bluetooth SIG:

<http://www.bluetooth.org>

Bluetooth developer tools on the Apple web site at:

<http://developer.apple.com/hardwaredrivers/bluetooth/>

Abbreviations

Here a lists of abbreviations used in this developer note.

Abbreviations and Standard Units

Standard units of measure used in this note include:

A	amperes	MB	megabytes
dB	decibels	Mbps	megabits per second
GB	gigabytes	Mbits	megabits
Hz	hertz	MHz	megahertz
KB	kilobytes	mm	millimeters
kg	kilograms	ns	nanoseconds
kHz	kilohertz	V	volts
mA	milliamperes	VDC	volts direct current
mAh	milliampere-hours		

Other Abbreviations

Other abbreviations used in this note include:

10Base-T	an Ethernet standard for data transmission at rates up to 10 Mbits per second
100Base-T	an Ethernet standard for data transmission at rates up to 100 Mbits per second
1000Base-T	an Ethernet standard for data transmission at rates up to 1000 Mbits per second
AGP	accelerated graphics port
AIM	ATA Interface Module
ANSI	American National Standards Institute
API	application programming interface

ASIC	application-specific integrated circuit
ATA	AT attachment
CAS	column address strobe, a memory control signal
CD	compact disc
CD-ROM	compact disc read-only memory
CPU	central processing unit
CRT	cathode ray tube, a video display device
DAA	data access adapter (a telephone line interface)
DAC	digital-to-analog converter
DDC	display data channel
DIMM	Dual Inline Memory Module
DB-DMA	descriptor-based direct memory access
DDK	device developer's kit
DDR	double data rate, a type of SDRAM
DMA	direct memory access
DVI	Digital Visual Interface
EHCI	Enhanced Host Controller Interface — USB 2.0 protocol
EIDE	enhanced integrated device electronics
G4	Generation 4, the fourth generation of PowerPC microprocessors, incorporating AltiVec technology
GND	ground
HFS	hierarchical file system
HID	human interface device, a class of USB devices
IC	integrated circuit
IDE	integrated device electronics
IEC	International Electrotechnical Commission
IIC	inter-IC control bus
IIS	inter-IC sound bus
I/O	input and output

Abbreviations

ISO	International Organization for Standardization
JEDEC	Joint Electron Device Engineering Council
L1	level 1 or first level, a type of CPU cache
L2	level 2 or second level, a type of CPU cache
L3	level 3 or third level, a type of CPU cache
LED	light emitting diode
Mac OS	Macintosh Operating System
MDI	Medium Dependent Interface
MDI-X	Medium Dependent Interface with Cross-Over
modem	modulator-demodulator, a data communications interface for use with analog telephone lines
NMI	nonmaskable interrupt
NOP	no operation
NVRAM	nonvolatile random-access memory
OHCI	Open Host Controller Interface — USB 1.1 protocol
OS	operating system
PCI	Peripheral Component Interconnect, an industry-standard expansion bus
PLL	phase-locked loop
RAM	random-access memory
RCA	Radio Corporation of America
rms	root mean square
ROM	read-only memory
SDR	single data rate
SBP	Serial Bus Protocol
SCSI	Small Computer System Interface
SDK	software developer's kit
SDRAM	synchronous dynamic RAM
SNR	signal to noise ratio
SO-DIMM	Small Outline Dual Inline Memory Module

APPENDIX B

Abbreviations

SPD	Serial Presence Detect, a feature of the SO-DIMM
TMDS	transition minimized differential signaling
USB	Universal Serial Bus, an industry-standard expansion bus
VCC	positive supply voltage (voltage for collectors)
