# Address Book Actions Reference

---

<b>Framework:</b>	AddressBook/ABActionsC.h
<b>Companion guide</b>	Address Book Programming Guide for Mac OS X
<b>Declared in</b>	ABActionsC.h

## Overview

**Note:** This document was previously titled *ABActions Reference for C*.

The Address Book action callbacks allow you to populate the rollover menus of the Address Book application with custom items. You do this by writing an Address Book action plug-in that implements a function named `ABActionRegisterCallbacks`. This function registers a set of callback functions that are invoked by Address Book. The plug-in's `CFBundle` must also implement the callback functions.

This is an example implementation of the `ABActionRegisterCallbacks` function:

```
ABActionCallbacks* ABActionRegisterCallbacks(void)
{
    ABActionCallbacks *callbacks;
    callbacks = malloc(sizeof(ABActionCallbacks));
    if (callbacks == NULL)
        return NULL;
    callbacks->version = 0;
    callbacks->property = actionProperty;
    callbacks->title = actionTitle;
    callbacks->enabled = actionEnabled;
    callbacks->selected = actionSelected;
    return callbacks;
}
```

Each action plug-in can implement only one action. Actions can only apply to items with labels.

Use Xcode to create Address Book action plug-ins. Place action plug-ins in `~/Library/Address Book Plug-Ins` or `/Library/Address Book Plug-Ins`, depending on the scope you want for the action.

## Callbacks

### **ABActionCopyTitleCallback**

Return the title of the menu item for the action. If the property returned by [ABActionGetPropertyCallback](#) (page 6) is a multi-value property, *identifier* contains the unique identifier of the value selected.

```
typedef CFStringRef (*ABActionCopyTitleCallback) (
    ABPersonRef person,
    CFStringRef identifier
);
```

You may implement the function like this:

```
CFStringRef actionTitle(ABPersonRef person,
    CFStringRef identifier)
```

#### **Availability**

Available in Mac OS X v10.3 and later.

#### **Declared In**

ABActionsC.h

### **ABActionEnabledCallback**

Return `true` if the action menu item should be enabled, `false` otherwise. If the property returned by [ABActionGetPropertyCallback](#) (page 6) is a multi-value property, *identifier* contains the unique identifier of the value selected.

```
typedef Boolean (*ABActionEnabledCallback) (
    ABPersonRef person,
    CFStringRef identifier
);
```

You may implement the function like this:

```
Boolean actionEnabled(ABPersonRef person,
    CFStringRef identifier)
```

#### **Availability**

Available in Mac OS X v10.3 and later.

#### **Declared In**

ABActionsC.h

### **ABActionGetPropertyCallback**

Return the property the action applies to.

```
typedef CFStringRef (*ABActionGetPropertyCallback)  
(void);
```

You may implement the function like this:

```
CFStringRef actionProperty(void)
```

**Availability**

Available in Mac OS X v10.3 and later.

**Declared In**

ABActionsC.h

### ABActionSelectedCallback

Execute the action. If the property returned by [ABActionGetPropertyCallback](#) (page 6) is a multi-value property, *identifier* contains the unique identifier of the value selected; otherwise, identifier is NULL.

```
typedef void (*ABActionSelectedCallback) (  
    ABPersonRef person,  
    CFStringRef identifier  
);
```

You may implement the function like this:

```
void actionSelected(ABPersonRef person,  
CFStringRef identifier)
```

**Availability**

Available in Mac OS X v10.3 and later.

**Declared In**

ABActionsC.h

## Data Types

### ABActionCallbacks

This is the structure that the `ABActionRegisterCallbacks` returns to tell Address Book about the action the plug-in implements.

```
typedef struct {  
    CFIndex version;  
    ABActionGetPropertyCallback property;  
    ABActionCopyTitleCallback title;  
    ABActionEnabledCallback enabled;  
    ABActionSelectedCallback selected;  
} ABActionCallbacks;
```

**Availability**

Available in Mac OS X v10.3 and later.

**Declared In**

ABActionsC.h

# Document Revision History

---

This table describes the changes to *Address Book Actions Reference*.

Date	Notes
2007-07-08	Changed title from <i>ABActions Reference for C</i> .
2003-09-04	Refined description of <code>ABActionSelectedCallback</code> .
2003-08-20	First version of <i>ABActions Reference for C</i> .
